Controller Integrated 2-Phase Closed-Loop Stepper Motor Driver

Features

- Brake operation for safe control of vertical load at power OFF and alarm occur. (built-in brake type)
- Motor driver and controller integral type
- Competitive price compared to the servo motor and closed-loop function and fast response for short-distance continuous drive
- Controllable maximum 31 axis with RS485 communication
- Realizing a wide variety of operation up to 256 steps using 14 control commands combination
- 4 type of operation mode: jog mode, continuous mode, index mode, program mode
- Improved user convenience with providing 50 I/O pins
- C language library provided (32-bit, 64-bit)
- Dedicated Windows program (atMotion) provided
- Responding rapidly and maintaining torque in stop without hunting
- Easy to use without tuning (various gain settings via programming)
- Applicable to the precision equipment such as optical inspection equipment with the features of maintaining torque in stop and having no micro vibration (hunting)
- Containing 10-level resolutions (electric gear)
- Various alarms out

Applications

- : overcurrent, overspeed, overheat, motor connection error, encoder connection error, and etc., overall 17 types
- Frame size 20mm, 28mm, 35mm, 42mm, 56mm, 60mm motors supported

• Filed requiring preciseness such as semiconductor equipment, 3D printer, optical inspection equipment, chip mounter, cartesian robot, conveying equipment, and alignment stage.

Manual

For the detail information and instructions, please refer to user manual, user manual for communication manual and library manual and be sure to follow cautions written in the technical descriptions (catalog, website). Visit our website (www.autonics.com) to download manuals.

Software (atMotion)

- atMotion is a comprehensive motion device management program that can be used with Autonics motion controllers.
- atMotion provides GUI control for easy and convenient parameter setting and monitoring data management of multiple devices.
- Visit our website (www.autonics.com) to download the user manual and software.

< Computer specification for using software>

Item	Minimum requirements
System	IBM PC compatible computer with Intel Pentium III or above
Operations	Microsoft Windows 98/NT/XP/Vista/7/8/10
Memory	256MB+
Hard disk	1GB+ of available hard disk space
VGA	Resolution: 1024×768 or higher
Others	RS-232 serial port (9-pin), USB port

Autonics Y-41

AiC-D Series

Control Input/Output

Inner signal of all input/output consists of photocoupler.

ON, [H]: photocoupler power ON

OFF, [L]: photocoupler power OFF

*Brake operation is only for built-in brake type.

O Input

1. Exclusive input (20)

Signal name	Descriptions	Pin no.	Signal name	Descriptions	Pin no.
Reset	Reset command	3	MD0/HMD0	Operation mode designate 0 / Home search mode designate 0	13
Start	Drive start command	4	MD1/HMD1	Operation mode designate 1 / Home search mode designate 1	
Stop	Drive stop command	5	Pause	Pause	15
EMG	Drive emergency stop command	6	Servo On/Off	Servo On/Off	16
Step0/+Run/+Jog	Step designate 0 / +Run / +Jog	7	Home	Home search	17
Step1/-Run/-Jog	Step designate 1 / -Run / -Jog	8	Alarm Reset	Alarm reset command	18
Step2/SSP0	Step designate 2 / Start speed designate 0	9	+Limit	+direction limit sensor	19
Step3/SSP1	Step designate 3 / Start speed designate 1	10	-Limit	-direction limit sensor	20
Step4/MSP0	Step designate 4 / Max. speed designate 0	11	ORG	Home sensor	21
Step5/MSP1	Step designate 5 / Max. speed designate 1	12	SD	Deceleration (deceleration stop) signal	22

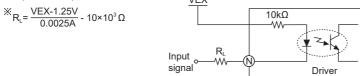

2. General input (9)

Signal name	Descriptions	Pin no.
IN0 to IN2	General input 0 to 2	26 to 28
IN3 to IN8	General input 3 to 8	30 to 35

3. Example of input circuit connection

- -All input circuits are insulated with photocoupler, and separate external power (recommended: 24VDC) is necessary.
- -Case of using external power 24VDC does not require R₁.
- -In case using external power over 24VDC, select R_L value that I_F (forward current of primary LED) of photocoupler to be around

※N: Input pin number of CN3

Output

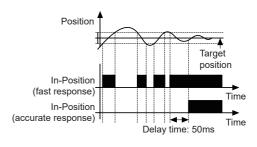

1. Exclusive output (AiC-D: 4, AiC-D-B: 6)

		,			
Signal name	Descriptions	Pin no.	Signal name	Descriptions	Pin no.
Brake+	Brake output (24VDC)	1	Alarm	Alarm output	38
Brake-	Brake output (GND)	2	Compare1 (trigger)	Comparison output1	39
In-Position	Drive ending pulse	23	Compare2 (trigger)	Comparison output2	40

2. In-Position

- -In-Position output represents output is output of positioning completion signal.
- -If the gap between target position and real position is under In-Position setting value after position command pulse has finished,
- In-Position output turns ON and In-Position indicator turns ON.
- -In reverse, when the gap is over In-Position setting value, In-Position output turns OFF and the In-Position indicator turns OFF.
- **For accurate drive, check the In-Position output again and execute the next drive.
- *Refer to '6. Example of output circuit connection'.

Fast Response		Accurate Response			
Setting	Value	Setting	Value		
0 (factory default)	0	8	0		
1	±1	9	±1		
2	±2	10	±2		
3	±3	11	±3		
4	±4	12	±4		
5	±5	13	±5		
6	±6	14	±6		
7	±7	15	±7		

■ Control Input/Output

3. Alarm/Warning

Alarm

- -This function stops motor to protect driver, depending on the error status such as overcurrent or overspeed.
- -In case of normal status, output turns ON, and in case of alarming status, output turns OFF.
- -When alarm occurs, brake operates
- -When supplying alarm reset, driver returns to the normal status.
- XRefer to '6. Example of output circuit connection'.

Warning

- -This function notices dangers with the alarm indicator prior to motor stop with limit signal or overload alarm.
- -When turning out from the alarming condition, driver returns to the normal status automatically.

Alarm indicator	No. of flashing	Alarm type	Descriptions	Motor status	Torque status
	1	Overcurrent error	When overcurrent flows at motor RUN element		
	2	Overspeed error	When motor speed is over 4,000rpm		
	3	Position tracking error	When the gap between position command value and current position value is over 90°		
	4	Overload error	When applying load over the rated load for over 1 sec.		
	5	Overheat error	When driver inner temperature is over 80°C	7	
	6	Motor connection error	When motor cable connection error occurs at driver	٦	
	7	Encoder connection error	When encoder cable connection error occurs at driver	Stop	Release
	8	Regenerative voltage error	When regenerative voltage is over 78V		
AL (red)	9	Motor misalignment	When motor is in misalignment	1	
(red)	10	Command speed error	When command speed is over 3,500rpm		
	11	Input voltage error	When input voltage is out of 24VDC ±10%		
	12	In-Position error	When position error (over 1) is kept over 3 sec, after motor stopped		
	13	Memory error	When memory error is detected as power supplied		
	14	Emergency stop	When emergently stopped with emergency stop command		
	15	Program mode error	When 'END' command is not exist at the last step	7	
	16	Index mode error	When other instruction is used but 'INC', 'ABS' When index command is not completed due to the stop command	Stop	Remain
	17	Home search mode error	When failed to find home		
Warning indicator	No. of flashing	Warning type	Descriptions	Motor status	Torque status
	1	+ software limit	When normal direction (CW) software limit is ON		
	2	- software limit	When reverse direction (CCW) software limit is ON	Cton	Damain
PWR	3	+ hardware limit	When normal direction (CW) hardware limit is ON	Stop	Remain
(green)	4	- hardware limit	When reverse direction (CCW) hardware limit is ON		
	5	Overload warning	When maximum load is kept connected over 10 sec (motor or driver can be overheated)	Remain	Remain

XEven though warning occurs, it drives as normal status and it may cause damage by fire.

It is recommend not to use the unit during warning status.

*Depending on alarm/warning type, it flashes 0.4 sec interval and it turns OFF for 0.8 sec repeatedly.

case of no. 3 alarm>

1		2	3		1	2	3	L
0.4 s	ес			0.8 sec				

4. Comparison output (compare1, compare2)

Outputs trigger pulse on the certain interval that user has set.

Mode	Descriptions
0	Not use comparison output.
1	Comparison output turns ON when the present absolute position value is same or bigger than the set position value.
2	Comparison output turns ON when the present absolute position value is same or smaller than the set position value.
3	Trigger pulses output with the set interval and width.

^{*}Please refer to the user manual to learn how to set.

5. General output (AiC-D: 10, AiC-D-B: 9)

• Standard type

Signal name	Descriptions	Pin no.
OUT0 to OUT9	General output 0 to 9	41 to 50

• Built-in brake type

	• •	
Signal name	Descriptions	Pin no.
OUT0 to OUT8	General output 0 to 8	41 to 49

(AA) Drivers

(AB) Motion Controllers

AiC-D Series

Control Input/Output

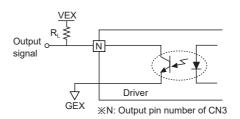

6. Example of output circuit connection

-All output circuits are insulated with photocoupler.

-External power input is available from 5VDC to 80VDC with the open collector method.

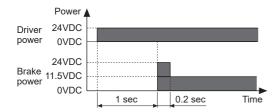

Select R_L value that I_C (collector current of secondary LED) of photocoupler to be around 10mA.

$$R_{L} = \frac{VEX-0.7V}{0.01A}$$

7. Brake output

-In order to reduce heat in the brake, connected to the motor, the driver outputs DC power to turn off the brake.

-When supplying power to the driver after connecting the driver and brake, the rated excitation voltage is supplied and the brake power is released after approx. 1 sec.

Then after approx. 0.2 sec, the excitation voltage is decreased to 11.5VDC and the released brake power is maintained.

While power is supplied to the driver, the brake is kept turning on, except in the Servo On status.

Communication Output

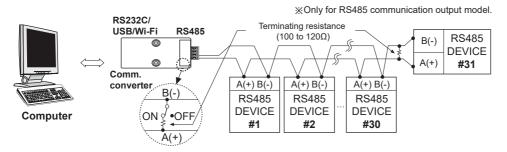

It is for parameter setting and monitoring via external devices (PC, PLC, etc.).

O Interface

Comm. protocol	Modbus RTU	Comm. speed	9600, 19200, 38400, 57600, 115200 bps
Connection type	RS485	Comm. response wait time	5 to 99ms
Application standard	Compliance with EIA RS485	Start bit	1-bit (fixed)
Max. connection	31 units (address: 01 to 31)	Data bit	8-bit (fixed)
Synchronous method	Asynchronous	Parity bit	None, Odd, Even
Comm. method	Two-wire half duplex	Stop bit	1-bit, 2-bit
Comm. distance	Max. 800m		

XIt is not allowed to set overlapping communication address at the same communication line. Use twisted pair wire for RS485 communication.

Application of system organization

XIt is recommended to use Autonics communication converter;

SCM-WF48 (Wi-Fi to RS485·USB wireless communication converter, sold separately),

SCM-US48I (USB to RS485 converter, sold separately), SCM-38I (RS232C to RS485 converter, sold separately).

Please use twisted pair wire, which is suitable for RS485 communication, for SCM-WF48, SCM-US48I and SCM-38I.

Troubleshooting

- 1. When driver communication is failed
 - ①Check whether the connection between driver and communication cable is correct.
 - @Check whether the port and communication speed is set correctly in the dedicated communication program.
- 2. When operation of motor is unstable
 - 1) Check that driver, motor, and brake are connected correctly.
 - @Check whether operation command is set correctly (e.g. speed, accel/deceleration speed).

Proper Usage

- Follow instructions in 'Proper Usage'.
 - Otherwise, It may cause unexpected accidents.
- 24VDC power supply should be insulated and limited voltage/current or Class 2, SELV power supply device.
- Re-supply power after min. 1 sec from disconnected power.
- In case communication is unstable due to the noise generated by supplied power or peripheral device, use ferrite core at communication line.
- It is recommended to use 485 converter with the separate power.
 - (Autonics product, SCM Series recommended)
- The thickness of cable should be same or thicker than the motor cable's when extending the motor cable.
- Keep the distance between power cable and signal cable more than 10cm.
- Motor vibration and noise can occur in specific frequency period
 - ① Change motor installation method or attach the damper.
 - ② Use the unit out of the dedicated frequency range when vibration and noise occurs due to changing motor RUN speed.
- For using motor, it is recommended to maintenance and inspection regularly.
 - ① Unwinding bolts and connection parts for the unit installation and load connection
 - 2 Strange sound from ball bearing of the unit
 - 3 Damage and stress of lead cable of the unit
 - 4 Connection error with motor
- (§) Inconsistency between the axis of motor output and the center, concentric (eccentric, declination) of the load, etc.
- This product does not prepare protection function for a motor.
- This unit may be used in the following environments.
 - ① Indoors (in the environment condition rated in 'Specifications')
 - ② Altitude max. 2,000m
 - 3 Pollution degree 2
 - ④ Installation category II

Y-48 Autonics
