# **Special Information**

Special information in this manual is classified as follows:

#### **Precautions for Safe Use**

Precautions on what to do and what not to do to ensure safe usage of the product.

#### **Precautions for Correct Use**

Precautions on what to do and what not to do to ensure proper operation and performance.

#### **Additional Information**

Additional information to read as required.

This information is provided to increase understanding or make operation easier.

#### **Version Information**

Information on differences in specifications and functionality between different versions.

# **Terms and Conditions Agreement**

### **Warranty and Limitations of Liability**

# Warranty

#### Exclusive Warranty

Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, expressed or implied.

#### Limitations

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right.

#### Buyer Remedy

Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

# **Limitations of Liability**

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY. Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

#### **Application Considerations**

# **Suitability for Use**

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

# **Programmable Products**

- Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.
- Omron Companies shall not be responsible for the operation of the user accessible operating system (e.g. Windows, Linux), or any consequence thereof.

#### **Disclaimers**

### **Performance Data**

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

# **Change in Specifications**

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

# **Errors and Omissions**

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

# **Safety Precautions**

### **Definition of Precautionary Information**

The following notation is used in this manual to provide precautions required to ensure safe usage of the Box PC Without Operating System. The safety precautions that are provided are extremely important to safety.

Always read and heed the information provided in all safety precautions.

The following notation is used.

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury. Additionally, there may be severe property damage.

Caution

Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury, or property damage.

#### **Symbols**

The circle and slash symbol indicates operations that you must not do. The specific operation is shown in the circle and explained in text.

This example indicates prohibiting disassembly.

The triangle symbol indicates precautions (including warnings). The specific operation is shown in the triangle and explained in text.

This example indicates a precaution for electric shock.

The triangle symbol indicates precautions (including warnings). The specific operation is shown in the triangle and explained in text.

This example indicates a general precaution.

The filled circle symbol indicates operations that you must do. The specific operation is shown in the circle and explained in text.

This example shows a general precaution for something that you must do.

# Warnings

# **⚠ WARNING**

# **Disassembly and Dropping**

Do not attempt to disassemble, repair, or modify the product in any way. Doing so may result in malfunction or fire.

### Installation

Always connect to a ground of 100  $\Omega$  or less when installing the product.

Ensure that installation and post-installation checks of the product are performed by personnel in charge who possess a thorough understanding of the machinery to be installed.

### Fail-safe Measures

Provide safety measures in external circuits to ensure safety in the system if an abnormality occurs due to malfunction of the product or due to other external factors affecting operation. Not doing so may result in serious accidents due to incorrect operation.

Emergency stop circuits, interlock circuit, limit circuits, and similar safety measures must be provided in external control circuits.

Unintended behavior may occur when an error occurs in internal memory of the product. As a countermeasure for such problems, external safety measures must be provided to ensure safe operation of the system.

The use of an uninterruptible power supply (UPS) allows normal operation to continue even if a momentary power failure occurs, possibly resulting in the reception of an erroneous signal from an external device affected by the momentary power failure. Take external fail-safe measures. Where necessary, monitor the power supply voltage on the system for external devices and use it as an interlock condition.

# **Actual Operation**

Security setting adjustments should only be performed by the engineer in charge that possesses a thorough understanding of the security settings. Selecting non-recommended security settings can put your system at risk.

Changing BIOS information is only allowed for the engineer in charge that possesses a thorough understanding of the BIOS settings because it can change the behavior of the product.

### **Cautions**

# 

# Wiring

The product has an internal non-isolated DC power supply. Circuit ground (0 VDC) and frame ground are connected together. When connecting a non-isolated device or a non-isolated interface to the product, take appropriate actions to avoid communication failures or damage to the mentioned ports.

Never ground the 24 VDC side of the power supply. This may cause a short circuit.

# **Precautions for Safe Use**

### Disassembly, Dropping, Mounting, Installation and Storage

- Do not drop the product or subject it to abnormal vibration or shock. Doing so may result in product malfunction or burning.
- When unpacking, check carefully for any external scratches or other damages. Also, shake the product gently and check for any abnormal sound.
- · Always use the devices specified in the relevant manual.
- The product must be installed in a control panel.
- Always install equipment that is included in the product specifications. Not doing so may result in failure or malfunction.
- If the storage period exceeds 6 months, check the performance of the Fan Unit before production starts.
- Install the product in the correct orientation and temperature according to the specifications in the manual to prevent overheating. Not doing so may result in malfunction.
- When connecting peripheral devices to the product, ensure sufficient countermeasures against noise and static electricity during installation of the peripheral devices.

#### Wiring

- Follow the instructions in the manual to correctly perform connector wiring and insertion. Doublecheck all wiring and connector insertion before turning ON the power supply.
- Always ensure connectors, cables, PCIe Cards and Storage devices are completely locked in place to prevent accidental disconnection.
- Before you connect a computer to the product, disconnect the power supply plug of the computer
  from the AC outlet. Also, if the computer has an FG terminal, make the connections so that the FG
  terminal has the same electrical potential as the product. A difference in electrical potential between
  the computer and the product may cause failure or malfunction.
- Do not bend or pull the cables beyond normal limit. Do not place heavy objects on top of the cables or other wiring lines. Doing so may break the cables.
- Always use power supply wires with sufficient wire diameters to prevent voltage drop and burning.
   Make sure that the current capacity of the wire is sufficient. Otherwise, excessive heat may be generated. When cross-wiring terminals, the total current for all the terminals will flow in the wire. When wiring cross-overs, make sure that the current capacity of each of the wires is not exceeded.
- Be sure that all mounting bracket screws and cable connector screws are tightened to the torque specified in the relevant manuals. The loose screws may result in fire or malfunction.
- · Use crimp terminals for wiring.
- For an NY Monitor Link connection, always follow the cable type and connection method specifications in the manual. Otherwise, communications may be faulty.

# Power Supply Design and Turning ON/OFF the Power Supply

- Always use a power supply that provides power within the rated range.
- · Do not perform a dielectric strength test.

- Always use the recommended uninterruptible power supply (UPS) to prevent data loss and other system file integrity issues caused by unexpected power interruption. Back up the system files in the planned way to prevent data loss and other system file integrity issues caused by incorrect operation.
- Use an Omron S8BA UPS with the correct revision number to prevent improper system shutdown.
- Power ON after the DVI or NY Monitor Link cable is connected between the product and an external monitor.
- Always check the power supply and power connections before applying power. Incorrect power connections can damage the product or cause burning.
- Always turn OFF the power supply to system before you attempt any of the following.
  - · Inserting or removing PCIe Cards
  - · Connecting cables
  - · Connecting or disconnecting the connectors
  - Wiring the system
  - Replacing or removing the HDD/SSD
  - · Replacing the Battery
  - · Replacing the Fan Unit

#### **Actual Operation**

- Choose a OS password that is not obvious to prevent unauthorized access.
- · Remember the OS user name and password. The product is inaccessible without it.
- Before operating the system, please make sure the appropriate software is installed and configured. Doing so may prevent unexpected operation.
- Install all updates and ensure the browser stays up-to-date.
- Install all updates and ensure the firewall stays up-to-date.
- Make sure that your OS environment is protected against malicious software and viruses.
- · Install all updates and ensure virus definitions stay up-to-date.
- Do not remove the fan cover while the power is ON. Contact with a rotating fan may result in injury.
- Virtual memory settings can affect the performance of the system. Disable the paging file after installation of applications or updates.
- Correctly perform wiring and setting, and ensure that the shutdown by the UPS can be executed.
- Always use the SMART monitoring feature for storage devices that do not comply to the Omron Storage Device Specifications. Monitor the operating temperature and vibrations to ensure they stay within the environmental specifications of the storage device.

### **Operation**

- Do not carry out the following operations when accessing a USB device or an SD Memory Card.
  - Turn OFF the power supply of the product.
  - Press the Power Button of the product.
  - · Remove a USB device or SD memory card.
- Do not attempt to remove or touch the fan unit while the product is powered ON or immediately after the power supply is turned OFF. If you attempt to replace the fan unit then, there is a risk of personal injury due to hot or rotating parts.
- Press the power button for several seconds to force the product shutdown. Always back up files in the planned way to prevent data loss or system file corruption.

• Do not touch any product housing when power is being supplied or immediately after the power supply is turned OFF. Doing so may result in burn injury.

#### **General Communications**

· Separate the machine network segment from the office network to avoid communication failures.

#### **Battery Replacement**

- Dispose of any Battery that has been dropped on the floor or otherwise subjected to excessive shock. Batteries that have been subjected to shock may leak if they are used.
- UL standards require that only an experienced engineer replace the Battery. Make sure that an experienced engineer is in charge of Battery replacement.
- The Battery may leak, rupture, heat, or ignite. Never short-circuit, charge, disassemble, heat, or incinerate the Battery or subject it to strong shock.

### Cleaning, Maintenance and Disposal

- Do not use corrosive substances to clean the product. Doing so may result in the failure or malfunction
- Dispose of the product and batteries according to local ordinances as they apply.

 The following information must be displayed for all products that contain primary lithium batteries with a perchlorate content of 6 ppb or higher when shipped to or transported through the State of California, USA.

Perchlorate Material - special handling may apply.

See http://www.dtsc.ca.gov/hazardouswaste/perchlorate.

The product contains a lithium battery with a perchlorate content of 6ppb or higher. When exporting
an end product containing the product to or shipping through California, USA, label all packing and
shipping containers appropriately.

# **Precautions for Correct Use**

### Storage, Installation and Mounting

- Do not operate or store the product in the following locations. Operation may stop or malfunctions may occur.
  - · Locations subject to direct sunlight
  - · Locations subject to temperatures or humidity outside the range specified in the specifications
  - · Locations subject to condensation as the result of severe changes in temperature
  - Locations subject to corrosive or flammable gases
  - · Locations subject to dust (especially iron dust) or salts
  - · Locations subject to exposure to water, oil or chemicals
  - · Locations subject to shock or vibration
  - · Locations outdoors subject to direct wind and rain
  - · Locations subject to strong ultraviolet light
- Always install the product with sufficient surrounding space to allow for adequate heat dissipation and cooling effect.
- Take appropriate and sufficient countermeasures when installing the product in the following locations
  - · Locations subject to strong, high-frequency noise
  - · Locations subject to static electricity or other forms of noise
  - · Locations subject to strong electromagnetic fields
  - Locations subject to possible exposure to radioactivity
  - · Locations close to power lines
- Always touch a grounded piece of metal to discharge static electricity from your body before starting an installation or maintenance procedure.
- Insert USB devices and PCIe devices correctly to avoid the burning, failure or malfunction.
- Execute a backup of the product before PCIe addition or replacement. Be sure that the PCIe device works correctly before you use them for actual operation. PCIe devices and their related software may cause an OS boot failure or crash.
- Ensure the selected operating system supports ACPI to enable operating system shutdown using the power button.
- Download the enhanced Video Driver from the OMRON Download Center and install it on the Industrial PC.

#### Wiring

- Always ensure the rated supply voltage is connected to the product.
- Do not allow wire clippings, shavings, or other foreign material to enter the product. Otherwise, burning, failure, or malfunction may occur. Cover the product or take other suitable countermeasures, especially during wiring work.
- Do not use cables exceeding the maximum specified length. Doing so may cause malfunction.
- Do not connect an AC power supply to the DC power connector.
- · Observe the following precautions to prevent broken wires.
  - · When you remove the sheath, be careful not to damage the conductor.
  - Connect the conductor without twisting the wires.

Do not weld the conductors. Doing so may cause the wires to break with vibration.

### **Actual Operation and Operation**

- After an OS update or a peripheral device driver update for the product is executed, the product behavior might be different. Confirm that operation is correct before you start actual operation.
- Always create a Windows System Repair Disk using Windows Backup and Restore to recover the HDD/SSD configuration if necessary.
- Ensure the fan is operational to provide adequate cooling while the power is turned ON.
- HDD and SSD storage devices, SD Memory Cards, power buttons, fan units and batteries have finite lives and if those are exceeded, the product may fail or malfunction.
- Always monitor the fan status. If a fan is used beyond its service life, the *Low Revolution Speed* warning message is displayed and the product overheating may occur.
- Always monitor the battery warning message. When a battery has low voltage, the system time will be lost.
- If the product experiences a sudden loss of power or disconnecting the cable while saving a setting or transfer of data is underway, the changes may not be stored and unexpected behavior may occur.
- Ensure that available software checks are performed by personnel in charge who possess a thorough understanding of the software.
- Diagnostic information is not available when the Industrial PC Support Utility is not installed.

#### **Battery Replacement**

- Turn ON the power after replacing the battery for a product that has been unused for an extended
  period of time. Leaving the product unused without turning ON the power even once after the battery
  is replaced may result in a shorter battery life.
- Make sure to use a battery of the correct type, install the battery properly.
- Apply power for at least five minutes before changing the battery. Mount a new battery within five
  minutes after turning OFF the power supply. If power is not supplied for at least five minutes, the
  clock data may be lost. Check the clock data after changing the battery.

# **SD Memory Cards**

· Insert an SD Memory Card completely and ensure it is in place.

# Regulations and Standards

#### **Conformance to EU Directives**

The Box PC Without Operating System complies with EU Directives. To ensure that the machine or device in which the Box PC Without Operating System is used complies with EU Directives, the following precautions must be observed:

- The Box PC Without Operating System must be installed within a control panel.
- The Box PC Without Operating System that complies with EU Directives also conforms to the Common Emission Standard. Radiated emission characteristics (10-m regulations) may vary depending on the configuration of the control panel used, other devices connected to the control panel, wiring, and other conditions. You must therefore confirm that the overall machine or equipment in which the Box PC Without Operating System is used complies with EU Directives.
- This is a Class A product (for industrial environments). In a residential environment, it may cause
  radio interference. If radio interference occurs, the user may be required to take appropriate measures.

# **Applicable Directive**

**EMC Directive** 

### **EMC Directive**

OMRON devices that comply with EU Directives also conform to the related EMC standards so that they can be more easily built into other devices or the overall machine. The actual products have been checked for conformity to EMC standards.

Applicable EMC (Electromagnetic Compatibility) standards are as follows:

- EMS (Electromagnetic Susceptibility): EN 61131-2
- EMI (Electromagnetic Interference): EN 61131-2 (Radiated emission: 10-m regulations)

Whether the products conform to the standards in the system used by the customer, however, must be checked by the customer. EMC-related performance of the OMRON devices that comply with EU Directives will vary depending on the configuration, wiring, and other conditions of the equipment or control panel on which the OMRON devices are installed. The customer must, therefore, perform the final check to confirm that devices and the overall machine conform to EMC standards.

#### **Conformance to KC Standards**

Observe the following precaution if you use Industrial PC Platform products in Korea.

A 급 기기 (업무용 방송통신기자재) 이 기기는 업무용(A 급) 전자파적합기기로서 판매자 또는 사용자는 이 점을 주의하시기 바라며, 가정외의 지역에서 사용하는 것을 목적으로 합니다.

Class A Device (Broadcasting Communications Device for Office Use).

This device obtained EMC registration for office use (Class A), and it is intended to be used in places other than homes.

Sellers and/or users need to take note of this.

#### Conformance to UL and CSA Standards

Some Industrial PC Platform products comply with UL and CSA standards. If you use a product that complies with UL or CSA standards and must apply those standards to your machinery or devices, refer to this manual. This manual provides the application conditions for complying with the standards. If the product is used in a manner not specified in the Instruction Sheet or in the product manuals then the protection provided by the equipment may be impaired.

# 1-1 Intended Use

The Box PC Without Operating System (also indicated as Box PC) is an industrial-grade PC intended for use within factory automation environments. This Box PC can be configured with Windows, Linux or a realtime operating system (RTOS). It can be used with third party software to serve as a powerful PC platform.

The Box PC can easily be integrated in manufacturing innovations like big data, NUI and IIoT. The Box PC Without Operating System has a compact design that offers flexibility, expandability and easy maintenance for applications in factory automation environments.

# 1-2 Hardware Features

The Industrial Box PC provides the following hardware features:

- Compact design with two mounting orientation options
   The Box PC has a compact design to minimize panel space while allowing for two mounting orientations.
- · Powerful CPU options

Powerful CPU options provide high performance for various applications.

- Fanless cooling for multiple CPU types
  - The Box PC has passive cooling for multiple CPU types which means no moving parts and less maintenance effort.
- Easy access to storage devices and the PCI Express Card
   Adding or changing storage devices (HDD, SSD) and PCI Express Card is fast and simple.
- · LED indicators
  - LED indicators provide a clear indication of the operational status of the Box PC.
- · DVI visual interface
  - The video interface for the Box PC is provided with a DVI connector for connection to a monitor. An extra (optional) DVI interface is available for connection to a second monitor.
- · NY Monitor Link interface
  - The interface combines video signals and USB signals for a connection to an OMRON Industrial Monitor using a single NY Monitor Link cable up to 100 meter.
- 3 Ethernet ports 1Gb/s Interface with multiple networks.
- Built-in I/O

Built-in I/O for UPS status and Box PC shutdown control are provided.

- · 4 USB ports
  - 2 USB2.0 ports and 2 USB3.0 ports are provided for connection to external USB devices such as keyboards, memory sticks, or other peripheral hardware.
- · Built-in SD Memory Card slot
  - An SD Memory Card slot is provided for removable memory.

## 1-5 Industrial PC Platform Overview

The Industrial PC Platform is an integrated range of products designed for use in a variety of industrial applications that will benefit from advanced PC technology. The range is scalable, robust and reliable, and is suitable for use with both standard operating system software and proprietary programs for machine control and automation.

In line with OMRON's established quality standards, each element in the Industrial PC Platform, ranging from the standalone Industrial Box PC to the touchscreen Industrial Monitor, is engineered with long-life components and built to the most advanced design standards.

The following sections introduce Industrial PC Platform products.

### 1-5-1 Industrial Monitor

The Industrial Monitor is of key importance at the interface between operator and system. The Industrial Monitor is efficient, effective and highly visible with an attractive design.

Using smart algorithms, the touch controller determines the exact location of each touch for precise control as well as detecting abnormal or illegal actions to protect misuse or false touches.

## 1-5-2 Industrial Box PC

The Industrial Box PC is designed to meet the specific needs of the industrial environment. Design simplification and future-proof architecture minimize the risk of failure. In addition, new PC features can be seamlessly incorporated, without the need for wholesale redesign.

### 1-5-3 Industrial Panel PC

The Industrial Panel PC intelligently combines the functionality of the Industrial Box PC and Industrial Monitor. No cables are used between the two components, which ensures optimal signal distribution and reliable operation in industrial environments.

## 2-2 LED Indicators

The Industrial Box PC has two rows of four LED indicators that show the operating status of the product. Both rows have the same function.

The following LED indicators are available:

| Item | LED<br>Indicator | Name      | Description  |  |
|------|------------------|-----------|--|--|
| Α    | PWR              | Power     | Indicates the operating mode of the Industrial Box PC. |  |

Refer to 1-4 Product Configuration on page 1 - 5 for configuration details.

## 2-2-1 PWR LED Indicator

The Power LED (PWR) indicates the operating mode of the Box PC.

| Color | Sta | tus      | Meaning   |
|-------|-----|----------|---|
| Green |     | Not lit  | There is no power supplied or the Box PC is OFF.                |
|       |     | Blinking | Power is currently supplied and the Box PC is in stand-by mode. |
|       |     | Lit      | Power is currently supplied and the Box PC is turned ON.        |

### 2-2-2 ERR LED Indicator

The Error LED (ERR) indicates the presence and type of an error within the Box PC.

| Color | Sta | tus      | Meaning                          |
|-------|-----|----------|----------------------------------|
| Red   |     | Not lit  | The 24 VDC power is not supplied |
|       |     |          | No error is present              |
|       |     | Blinking | Fan Error                        |
|       |     |          | Battery low                      |
|       |     | Lit      | Thermal shutdown                 |
|       |     |          | Watchdog Error                   |
|       |     |          | Power Supply undervoltage error  |
|       |     |          | Power Supply overvoltage error   |
|       |     |          | Power supply defective           |

#### **Additional Information**

- Refer to 7-2 Corrective Maintenance on page 7 5 for actions to solve errors.
- For a Box PC with a Windows operating system the status of this LED can be defined by users using the Industrial PC System API.

Refer to NY-series Industrial Box PC User's Manual (Cat. No. W553) for Industrial PC System API details.

### 2-2-3 HDD LED Indicator

The Hard Disk Drive LED (HDD) indicates activity of the HDD or SSD.

| Color  | Sta | tus        | Meaning                   |
|--------|-----|------------|---------------------------|
| Yellow |     | Flickering | The HDD or SSD is active. |

### 2-2-4 RUN LED Indicator

The RUN LED has no functionality and will not be lit.

### **Additional Information**

For a Box PC with a Windows operating system the status of this LED can be defined using the Industrial PC System API.

Refer to NY-series Industrial Box PC User's Manual (Cat. No. W553) for Industrial PC System API details.

## 2-3 Power Button

The power button is used to manually switch the Box PC ON and OFF.

- Refer to 6-1 Power ON on page 6 2 for ON details.
- Refer to 6-2 Power OFF on page 6 3 for OFF details.

# 2-4 Drive Bays

The drive bays in the Box PC Without Operating System accept 2.5 inch Hard Disk Drives (HDD) or Solid State Drives (SSD). Depending on the model one or two drives are supported.

- Refer to 4-1-4 CPU Specifications on page 4 6 for the number of supported drives.
- Refer to 4-1-6 Storage Device Specifications on page 4 8 for storage device specifications
- Refer to 5-2-1 Install a Drive on page 5 5 for install information.
- Refer to 7-2-5 Replace a Drive on page 7 11 for maintenance information.

# 2-5 SD Memory Card Slot

The SD Memory Card slot on the Box PC Without Operating System accepts SD Memory Cards with the following specifications.

- SDHC type (SD 2.0 specification)
- · Up to 32 GB capacity

### **Additional Information**

Refer to 2-9-2 SD Memory Cards on page 2 - 19 for SD Memory Card details.

## 2-6 PCIe Card Slot

The PCI Express (PCIe) Card slot of the Box PC Without Operating System accepts various PCIe Cards for specific hardware needs.

The PCIe Card connectors are available behind the cover A and the PCIe Card is mounted in the PCIe drawer B.

- Refer to 4-1-7 PCIe Card Specifications on page 4 10 for specifications.
- Refer to 5-2-2 Install the PCIe Card on page 5 9 for install information.
- Refer to 7-2-6 Replace the PCIe Card on page 7 16 for maintenance information.

## 2-7 Connectors

This section gives an overview of the available connectors for the Box PC Without Operating System.

### 2-7-1 Power Connector

The power connector on the Box PC is used to supply 24 VDC power to the Box PC.

The power connector is supplied with the Box PC.

#### **Additional Information**

- Refer to 4-2-1 Power Connector Specifications on page 4 13 for specifications.
- Refer to 5-4-3 Wire the Power Connector on page 5 36 for wiring details.
- Refer to 5-5 Connect on page 5 42 for connection details.

### 2-7-2 I/O Connector

The I/O connector on the Box PC Without Operating System provides discrete signals with the following functions.

- Input signal to the Box PC when a connected UPS switches to battery power.
- Input signal to the Box PC to perform a shutdown or power ON when the signal turns ON.
- Output signal from the Box PC to indicate the power status of the Box PC.

The I/O connector is supplied with the Box PC.

### **Additional Information**

- Refer to 4-2-2 I/O Connector Specifications on page 4 14 for specifications.
- Refer to 5-4-4 Wire the I/O Connector on page 5 39 for wiring details.
- Refer to 5-5 Connect on page 5 42 for connection details.

## 2-7-3 USB Connectors

The USB connectors support USB 2.0 and USB 3.0 specifications.

All USB interfaces are protected against overcurrent and all ports support Wake-on-USB.

- Refer to 4-2-3 USB Connector Specifications on page 4 18 for specifications.
- Refer to 5-5 Connect on page 5 42 for connection details.

### 2-7-4 Ethernet Connectors

The Ethernet connectors provide 3 individual Ethernet ports on the Box PC Without Operating System. Each port offers 10BASE-T/100BASE-TX/1000BASE-T Ethernet speeds.

### **Additional Information**

- Refer to 4-2-4 Ethernet Connector Specifications on page 4 19 for specifications.
- Refer to 5-5 Connect on page 5 42 for connection details.

### 2-7-5 DVI Connector

The DVI interfaces supported on this connector are dependent on the configuration of the Box PC Without Operating System.

- Refer to 1-4 Product Configuration on page 1 5 for configuration details.
- Refer to 4-2-5 DVI Connector Specifications on page 4 21 for specifications.
- Refer to 5-5 Connect on page 5 42 for connection details.

## 2-7-6 RS-232C Connector (Optional)

Depending on the product configuration an optional RS-232C connector is available.

### **Additional Information**

- Refer to 1-4 Product Configuration on page 1 5 for configuration details.
- Refer to 4-2-7 RS-232C Connector Specifications on page 4 23 for specifications.
- Refer to 5-5 Connect on page 5 42 for connection details.

## 2-7-7 DVI-D Connector (Optional)

Depending on the product configuration an optional DVI-D connector is available. This interface only supports digital video signals.

- Refer to 1-4 Product Configuration on page 1 5 for configuration details.
- Refer to 4-2-6 DVI-D Connector Specifications on page 4 22 for specifications.
- Refer to 5-5 Connect on page 5 42 for connection details.

## 2-7-8 NY Monitor Link Connector (Optional)

Depending on the product configuration this NY Monitor Link connector is available.

The NY Monitor Link interface connector connects an OMRON Industrial PC to the OMRON Industrial Monitor.

Industrial PC Industrial Monitor

- Refer to 1-4 Product Configuration on page 1 5 for configuration details.
- Refer to 4-2-8 NY Monitor Link Connector Specifications on page 4 23 for specifications.
- Refer to 5-5 Connect on page 5 42 for connection details.

# 2-8 Spare Parts

The following spare parts for the Box PC Without Operating System are available.

## 2-8-1 Battery

One battery is supplied with the Box PC. The battery supplies power to the real-time clock. The battery is located inside the Box PC.

| Model      | Appearance | Specifications                |
|------------|------------|-------------------------------|
| CJ1W-BAT01 |            | Service life: 5 years at 25°C |

### **Additional Information**

Refer to 7-2-4 Replace the Battery on page 7 - 9 for the replacement procedure.

## 2-8-2 Fan Unit

The Fan Unit is available for the Box PC that has active cooling.

| Model      | Appearance | Specifications  |
|------------|------------|---|
| NY000-AF00 |            | <ul> <li>Service life: 70,000 hours of continuous operation at 40°C with 15% to 65% relative humidity</li> <li>Shelf life: 6 months         This is the storage limitation with no power supplied. We highly recommend performance testing if the Fan Unit has been stored over 6 months.     </li> </ul> |

### **Additional Information**

Refer to 7-2-3 Replace the Fan Unit on page 7 - 7 for the replacement procedure.

## 2-8-3 Accessory Kit

The accessory kit for the Box PC.

| Model      | Appearance | Specifications   |
|------------|------------|--|
| NY000-AK00 |            | Accessory Kit containing all accessories supplied with the Box PC.  Power connector  I/O connector  Drive bracket for drive installation  amounting screws for drive installation  PCIe Card support for PCIe Card installation  PCIe Card clip for PCIe Card installation |

# 2-9 Optional Hardware

The following optional hardware is available for the Box PC Without Operating System.

## 2-9-1 Mounting Brackets

Mounting brackets details are provided below.

| Model      | Appearance | Bracket type |
|------------|------------|--------------|
| NY000-AB00 |            | Book mount   |
| NY000-AB01 |            | Wall mount   |

## 2-9-2 SD Memory Cards

SD Memory Card details are provided below.

OMRON is not responsible for the operation, performance or write life of any other brand of SD Memory Card.

| Model     | Appearance | Card type | Capacity | Format |
|-----------|------------|-----------|----------|--------|
| HMC-SD291 | omron A    | SD Card   | 2 GB     | FAT16  |
| HMC-SD491 | SS 2GB     | SDHC Card | 4 GB     | FAT32  |

### 2-9-3 USB Flash Drives

USB Flash Drive details are provided below.

OMRON is not responsible for the operation, performance, or write life of any other brand of USB Flash Drives.

| Model    | Appearance | Capacity |
|----------|------------|----------|
| FZ-MEM2G |            | 2 GB     |
| FZ-MEM8G | C. Her     | 8 GB     |

## 2-9-4 Storage Devices

Storage device details are provided below.

OMRON is not responsible for the operation, performance, or write life of any other storage device.

| Model      | Appearance | Storage type | Capacity |
|------------|------------|--------------|----------|
| NY000-AH00 |            | HDD          | 320 GB   |
| NY000-AS00 |            | SSD SLC      | 32 GB    |
| NY000-AS01 |            |              | 64 GB    |
| NY000-AS02 |            | SSD iMLC     | 128 GB   |

#### **Additional Information**

Refer to 4-1-6 Storage Device Specifications on page 4 - 8 for storage device specifications.

## **Storage Device Considerations**

For a storage device that is not an OMRON NY000-A \understand \understand consider the following:

- OMRON is not responsible for the operation, performance or write life of any storage device other than those supplied by OMRON.
- Test and measure the environmental performance of the intended storage device before actual operation, using the SMART monitoring feature of the selected storage device.
- Ensure the temperature and vibrations of the storage device are within the operating temperature specifications and vibration specifications during actual operation.
- Using a storage device with maximum power consumption exceeding 2W is not advised. Ensure
  that the SMART monitor features of the storage device are used to detect overheating.

- Refer to 4-1-6 Storage Device Specifications on page 4 8 for storage device specifications.
- Refer to 4-3-1 Operation Environment Specifications on page 4 25 for environment specifications, specifically temperature and vibration specifications.

### 2-9-5 DVI Cables

DVI cable details are provided below.

OMRON is not responsible for the operation or performance of any other brand of DVI cable.

| Model   | Appearance | Cable length | Specifications             |
|---------|------------|--------------|----------------------------|
| NY000-  |            | 2 m          | Supports DVI-D             |
| AC00 2M |            |              | Minimum bend radius: 36 mm |
| NY000-  |            | 5 m          |                            |

## **DVI Cable Clearance**

The DVI cable requires a minimum clearance of 90 mm from the connector entry to prevent excessive strain on the connector and cable assembly.

## 2-9-6 USB Type-A to USB Type-B Cables

USB Type-A to USB Type-B cable details are provided below.

OMRON is not responsible for the operation or performance of any other brand of USB Type-A to USB Type-B cable.

| Model      | Appearance | Cable length | Specifications             |
|------------|------------|--------------|----------------------------|
| FH-VUAB 2M |            | 2 m          | • USB 2.0                  |
| FH-VUAB 5M |            | 5 m          | Minimum bend radius: 25 mm |

## **USB Type-A to USB Type-B Cable Clearance**

The USB Type-A to USB Type-B cable requires a minimum clearance of 60 mm from the connector entry to prevent excessive strain on the connector and cable assembly.

## 2-9-7 NY Monitor Link Cables

The following table lists the recommended cables and connectors for the NY Monitor Link cable.

| Application   |                  | Intra cabinet or light industrial environment | Inter cabinet                 | Inter cabinet and harsh industrial environment |

### **Additional Information**

When making cables, connect the shield to the connectors at both ends.

### **NY Monitor Link Cable Clearance**

The NY Monitor Link cable requires a minimum clearance from the connector entry to prevent excessive strain on the connector and cable assembly.

The minimum clearance consists of the sum of:

- · Connector length
- · Maximum bending radius of cable in a fixed position

### **Precautions for Safe Use**

Use an Omron S8BA UPS with the correct revision number to prevent improper system shutdown.

#### **Additional Information**

- Refer to 2-9-9 Power Supply on page 2 23 for power supply details.
- Refer to 4-1-3 Power Consumption Specifications on page 4 4 for power consumption details.
- Refer to the OMRON website for S8BA specifications or to the UPS S8BA User's Manual (Cat. No. U702) for the UPS manual.

Note that the power consumption details determine the output current/capacity of your UPS.

# 3-1 Compatible Operating Systems

The operating system installed on the Box PC must be:

- · compatible with the Advanced Configuration and Power Interface (ACPI) protocol
- · installed on the storage device in drive bay A

Compatible operating systems for the Box PC are:

- · Windows 7
- · Windows 10
- Wind River Linux 7 (64bit)
- Wind River VxWorks 7 (64bit)
- Linux Ubuntu LTS 14.04 (64Bit)

| Power button life                    | 100,000 operations  |
| Fan life                             | 8 years of continuous operation at 40°C   |
| Battery life                         | 5 years at 25°C (for battery CJ1W-BAT01)  |

## 4-1-3 Power Consumption Specifications

The following tables provide details on the power consumption of the Box PC Without Operating System.

The total power consumption is the sum of the power consumption of all items that are installed in your Box PC.

### **Additional Information**

Refer to 1-4 Product Configuration on page 1 - 5 for details.

### 4-1-7 PCIe Card Specifications

The PCI Express (PCIe) Card slot of the Box PC Without Operating System accepts various cards for specific hardware needs.

Ensure that, according to the PCIe hardware specifications, the indent (A) is present in the PCIe Card.

The following tables provide PCIe Card details per CPU type.

# PCle Card Slot Specifications with an Intel<sup>®</sup> Core<sup>™</sup> i7-4700EQ CPU

The table below provides PCIe Card slot details for Box PC Without Operating Systems with an Intel<sup>®</sup> Core<sup>™</sup> i7-4700EQ CPU.

| Item              | Specifications   |
|-------------------|--|
| Configuration     | X4 (4 lanes) up to Gen 3   |
| Card height       | Standard height cards, 4.20 inches (106.7 mm) <sup>*1</sup>  |
| Card length       | Half-length cards, 6.6 inches (167.65 mm)  |
| Power consumption | Refer to <i>Power Consumption with an Intel</i> <sup>®</sup> <i>Core</i> <sup>™</sup> <i>i7-4700EQ CPU</i> on page 4 - 4 for the maximum power consumption |

<sup>\*1.</sup> Low profile cards, 2.536 inches (64.4 mm) are not supported.

# PCle Card Slot Specifications with an Intel<sup>®</sup> Core<sup>™</sup> i5-4300U CPU

The table below provides PCIe Card slot details for Box PC Without Operating Systems with an Intel<sup>®</sup> Core<sup>™</sup> i5-4300U CPU.

| Item              | Specifications  |

<sup>\*1.</sup> Low profile cards, 2.536 inches (64.4 mm) are not supported.

### 4-1-8 Bracket Specifications

The metal mounting brackets mount your Box PC and they are the connection for the functional ground.

Use metal screws with a diameter of 4 mm or 5 mm to mount the brackets.

Mounting screw locations for book mount and wall mount orientation:

### **Additional Information**

- Refer to 5-3-8 Book Mount Procedure on page 5 26 for book mount details.
- Refer to 5-3-9 Wall Mount Procedure on page 5 27 for wall mount details.

# 4-2 Connector Specifications

This section provides the Connector Specifications of the Box PC Without Operating System.

### 4-2-1 Power Connector Specifications

The power supply connector can be locked to prevent unintentional disconnection.

The connector can only be inserted the correct way.

The connector is a Phoenix Contact type SPC5/2-STCL-7.62 BK (1711708).

The Box PC provides protection against reverse polarity.

The pin layout represents the power connector on the Box PC.

| Pin | Description |
|-----|-------------|
| 1   | 24 VDC      |
| 2   | 0 VDC       |

| Item                       | Specifications |  |
|----------------------------|----------------|--|
| Conductor isolation rating | 90°C           |  |
| Termination rating         | 90°C           |  |

#### **Additional Information**

- Refer to 5-4-3 Wire the Power Connector on page 5 36 for wiring details.
- Refer to 5-4-2 Ground on page 5 29 for grounding details.

# **Locking and Removing the Power Connector**

The power connector automatically locks into place when the black part of the connector is held and pushed in.

Pushing both orange sliders  $^{\textcircled{B}}$  towards the end of the connector  $^{\textcircled{A}}$  will release the lock when removing the connector.

### 4-2-2 I/O Connector Specifications

Details of the I/O connector are provided below.

The I/O connector can be locked to prevent unintentional disconnection.

The connector can only be inserted in the correct way.

The Lock-and-Release Latch connector is a Phoenix Contact type DFMC 1,5/ 3-ST-3,5-LR BK (1711658).

| Item                       | Specifications |  |
|----------------------------|----------------|--|
| Conductor isolation rating | 90°C           |  |
| Termination rating         | 90°C           |  |

### I/O Connector Pin Details

The pin details of the I/O connector.

The pin layout represents the I/O connector on the Box PC.

The I/O signals connected must be powered from a power supply which conforms to the SELV standards.

Pin details of the I/O Connector:

| Pin | Descrip-<br>tion              | Туре  | Electrical<br>Specifications   | Details   |

Connect to SELV   | If the signal changes from inactive to active, the Box PC will perform one of the following operations.  • When powered ON, the Box PC will shut down and power OFF.  • When powered OFF, the Box PC will power ON.   |
| 5   | UPS Mode<br>Input             |   |  | This input is provided to allow monitoring the state of an external UPS unit that provides a compatible power state output signal.  |

<sup>\*1.</sup> Refer to I/O Connector Power Status Output Details on page 4 - 16 for Power Status Output details.

<sup>\*2.</sup> Refer to 6-1 Power ON on page 6 - 2 and 6-2 Power OFF on page 6 - 3 for Power ON/OFF Input details.

#### **Additional Information**

Refer to 5-4-4 Wire the I/O Connector on page 5 - 39 for I/O connector wiring details.

### I/O Connector Power Status Output Details

This section provides details of the Power Status Output relay.

The Power Status Output is a relay between pin 1 and 2 of the I/O Connector.

#### Power ON Power Status Output Operation

This section provides power ON details of the Power Status Output operation.

The Power Status Output turns ON to indicate that the system has been shut down and the power supply to the Box PC can be turned OFF.

If power is not turned OFF, the Power Status output will turn OFF when the Box PC is turned ON.

The Power Status Output is ON (A) when the Box PC has been used and has not been disconnected from the power supply.

The Power Status Output is OFF <sup>(B)</sup> when the Box PC has been disconnected from the power supply.

#### **Additional Information**

Refer to 5-4-4 Wire the I/O Connector on page 5 - 39 for I/O connector wiring details.

#### Power OFF Power Status Output Operation

This section provides power OFF details of the Power Status Output operation.

The Power Status Output turns ON to indicate that the system has been shut down and the power supply to the Box PC can be turned OFF.

If power is not turned OFF, the Power Status output will stay ON (A). It will turn OFF when the Box PC is turned ON.

If power is turned OFF, the Power Status Output will turn OFF <sup>®</sup>.

#### **Additional Information**

Refer to 5-4-4 Wire the I/O Connector on page 5 - 39 for I/O connector wiring details.

### Lock and Remove the I/O Connector

The I/O connector locks into place when the black part of the connector is held and pushed in.

Tilting both levers (B) will release the I/O connector (A) from the Box PC.

### 4-2-3 USB Connector Specifications

The Box PC Without Operating System includes four USB connectors. Two connectors provide version 2.0 performance and two connectors provide version 3.0 performance. Details of the USB interface connectors are provided below.

The connector layout represents the USB connectors on the Box PC.

| Interface Connector | Details                  |
|---------------------|--------------------------|
| 1                   | • USB 3.0                |
| 2                   | 900 mA maximum current   |
|                     | 3 m maximum cable length |
|                     | Blue color               |
| 3                   | • USB 2.0                |
| 4                   | 500 mA maximum current   |
|                     | 5 m maximum cable length |
|                     | Black color              |

#### **Additional Information**

Refer to 5-4-2 Ground on page 5 - 29 for grounding details.

### 4-2-4 Ethernet Connector Specifications

Details of the RJ45 Ethernet connectors are provided below.

The Ethernet connector locks automatically to prevent unintentional disconnection.

The view represents the Ethernet connector on the Box PC Without Operating System.

### **Ethernet Connector LED Indicators**

Each connector has LED indicators for speed, link and activity.

| Item | Indicator | Color  | Status   | Description       |
|------|-----------|--------|----------|-------------------|
| A    | Link/Act  | Yellow | Not lit  | No link           |

| Maximum number of cascade connections                          | There are no restrictions if an Ethernet switch is used                |

### 4-2-5 DVI Connector Specifications

DVI is the standard video interface for the Box PC.

The video interface depends on the model of the Box PC as specified below:

#### **Additional Information**

- Refer to 4-1-4 CPU Specifications on page 4 6 for graphics controller details.
- Refer to 5-4-2 Ground on page 5 29 for grounding details.
- Refer to A-2-2 DVI-D Connector Pin Details on page A 12 for pin details.

The following tables provide DVI details per CPU type.

# DVI-I Connector Specifications with an Intel<sup>®</sup> Core<sup>™</sup> i7-4700EQ CPU

DVI-I connector specifications for Box PC Without Operating Systems with an Intel<sup>®</sup> Core<sup>™</sup> i7-4700EQ CPU.

#### **Additional Information**

- Refer to 4-1-4 CPU Specifications on page 4 6 for graphics controller details.
- Refer to 5-4-2 Ground on page 5 29 for grounding details.
- Refer to A-2-2 DVI-D Connector Pin Details on page A 12 for pin details.

### 4-2-7 RS-232C Connector Specifications

The optional RS-232C interface on the Box PC uses a standard SUBD9 connector.

The RS-232C interface is not isolated from the internal Box PC's components.

#### **Additional Information**

- Refer to 5-4-2 Ground on page 5 29 for grounding details.
- Refer to A-3 RS-232C Connector Pin Details on page A 14 for pin details.

## 4-2-8 NY Monitor Link Connector Specifications

The NY Monitor Link connector connects an OMRON Industrial Monitor with an OMRON Industrial PC that has an NY monitor link connector.

The NY Monitor Link communication is a combination of video and USB information.

| Item  | Specifications  |
|---|---|
| Connector type  | RJ45  |
| Transmission media  | Twisted pair cable of category 6A or higher (double-shielded straight cable with copper braiding and aluminum foil) |
| Maximum cable length between Industrial PC and Industrial Monitor | 100 m   |
| Topology  | Line (direct) connection only *1  |
| Video resolution  | 1.280 x 800 pixels at 60 Hz   |
| Data throughput rate  | 280 Mbps max.   |

<sup>\*1.</sup> Use a direct connection between the OMRON Industrial PC and the OMRON Industrial Monitor.

Do not use:

- · Ethernet switches
- Ethernet hubs
- · Daisy chain connections

The NY Monitor Link connector locks automatically to prevent unintentional disconnection.

# 4-3 Environmental Specifications

This section provides environmental specifications of the Box PC Without Operating System.

### 4-3-1 Operation Environment Specifications

The following table provides the general environmental specifications for the Industrial Box PC.

| Item                                | Specifications  |
|-------------------------------------|---|
| Ambient operating temperature       | 0 to 55°C *1  |
| Ambient storage temperature         | -20 to 70°C *1  |
| Ambient operating humidity          | 10% to 90% with no condensation   |
| Ambient storage humidity            | 10% to 90% with no condensation   |
| Operating atmosphere                | No corrosive gases  |
| Altitude                            | 2,000 m max.  |
| Noise resistance (during operation) | Conforms to IEC61000-4-4, 2kV (power lines)                             |

|                                     | At ambient temperature of 25°C: −1.5 to +1.5 min error per month        |
|                                     | At ambient temperature of 0°C: −3 to +1 min error per month             |

<sup>\*1.</sup> Refer to 4-3-2 Temperature and Humidity Specifications on page 4 - 26 for ambient operating temperature details per CPU type.

\*2. Vibration resistance depends on the Box PC's mounting orientation and storage device type:

| Mounting Orientation | SSD      | HDD                  |
|----------------------|----------|----------------------|
| Book                 | 9.8 m/s² | 2.5 m/s <sup>2</sup> |
| Wall                 |          | 4.9 m/s <sup>2</sup> |

### 4-3-2 Temperature and Humidity Specifications

The allowed ambient operating temperature and ambient humidity depend on product type, CPU type, mounting orientation, and storage device type.

The following sections provide temperature and humidity details per CPU type.

### **Temperature and Humidity Graphs**

The maximum ambient operating temperature and ambient humidity are specified per CPU type, mounting orientation and storage device type.

The following graphs provide ambient temperature and humidity details per storage device type and the conditions for storage.

- Operate the Box PC with a SSD within the general environmental specifications.
- Operate the Box PC with a HDD within the ambient temperature and humidity ranges as shown in following graph.

#### **Additional Information**

Refer to the ambient temperature and humidity specifications per CPU type for specific limitations.

- Store the Box PC with a SSD within the general environmental specifications.
- Store the Box PC with a HDD within the ambient temperature and humidity ranges as shown in following graph.

# 5-1 Unpack

This section provides details on how to unpack the Box PC Without Operating System.

### 5-1-1 Unpack Procedure

**1** Check the package for damage. If there is any visible damage:

- Take photos of the package and save them.
- · Inform your supplier immediately.
- **2** Open the package.

  Ensure not to damage the contents.
- **3** Ensure that all items are present.

#### **Additional Information**

Refer to 5-1-2 Items Supplied on page 5 - 2 for the items supplied.

### 5-1-2 Items Supplied

The Industrial Box PC is supplied with several items.

#### **Additional Information**

- Refer to Items Supplied with the Industrial Box PC on page 5 3 for more details.
- Refer to Items Supplied with the Brackets on page 5 4 for more details.

### Items Supplied with the Industrial Box PC

This section describes the items supplied with your Industrial Box PC.

- · Industrial Box PC
- Documentation:
  - Safety Precautions sheets (English and Japanese)
  - EU Compliance sheet
  - · Standards and Certifications sheet
- · Bag with:
  - Power connector
  - I/O connector
  - 2 Drive brackets for drive installations
  - 8 Mounting screws for drive installations
  - PCIe Card support for PCIe Card installation

### Items Supplied with the Brackets

This section describes the items supplied with the brackets for your Industrial Box PC.

#### **Additional Information**

- Refer to 2-9-1 Mounting Brackets on page 2 19 for bracket details.
- Refer to 5-3-8 Book Mount Procedure on page 5 26 for book mount installation.
- Refer to 5-3-9 Wall Mount Procedure on page 5 27 for wall mount installation.

#### Book Mount

Check if the content is complete.

Supplied items:

- · 1 Book mount bracket
- · 6 Mounting screws
- · 1 Nut for the functional ground terminal connection
- · 2 Washers for the functional ground terminal connection

#### Wall Mount

Check if the content is complete.

Supplied items:

- · 2 Wall mount brackets
- · 6 Mounting screws
- · 1 Nut for the functional ground terminal connection
- 2 Washers for the functional ground terminal connection

# 5-2 Install Options

This section describes the installable options for the Box PC Without Operating System.

#### 5-2-1 Install a Drive

A drive is a storage device for the Box PC Without Operating System.

#### **Additional Information**

- Depending on the product configuration a drive is already installed.
   Refer to 1-4 Product Configuration on page 1 5 for storage details.
- Depending on the CPU type one or two drives are supported.

  Refer to 4-1-4 CPU Specifications on page 4 6 for the number of supported drives.
- Refer to 2-9-4 Storage Devices on page 2 20 for the recommended drive models.
- Refer to 4-1-6 Storage Device Specifications on page 4 8 for drive specifications.

#### Prepare the following items:

- · The drive
  - A drive is not supplied with the Box PC.
- The drive bracket with mounting screws These are supplied with the Box PC.

#### To install a drive:

- **1** Ensure the Box PC is OFF.
- **2** Remove the drive cover.

- (1) Push the lock lever 1.
- (2) Tilt the drive cover 2.
- (3) Remove the drive cover 3.

**3** Pull the metal shielding cover out of the Box PC.

**4** Align the connectors of the drive as shown ⓐ on the bracket. Then insert the replacement drive ● in the bracket and insert the 4 mounting screws ②. Tighten these screws with a torque of 0.35 N·m.

- **5** Insert the bracket with the drive in the correct bay.
  - · A drive for the operating system has to be inserted in bay A
  - The drive for additional storage can be inserted in bay B Ensure the bracket is completely in the Box PC with an extra push.

The drive bracket will lock into place when it is fully inserted.

6 Insert the metal shielding cover.

**7** Mount the drive cover.

The lock lever will click when closed correctly.

- **8** Finalize the drive installation when the Box PC installation is completed.
  - If the drive is inserted in bay A:
    - (1) Install an operating system
    - (2) Power OFF and then Power ON
    - (3) Ensure the drive is functional and confirm normal operation. If required set the drive as boot disk in the BIOS settings. Refer to A-1-5 BIOS - Boot on page A - 9 for boot priority settings.
  - If the drive is inserted in bay B:
    - (1) Ensure the drive is functional and confirm normal operation.
      If the Box PC has a Windows operating system and the storage drive is not visible in Windows then the drive needs to be allocated.

The drive is installed and functional.

### 5-2-2 Install the PCIe Card

Prepare the following items:

The PCIe Card.

A PCIe Card is not supplied with the Box PC.

#### **Additional Information**

Refer to 4-1-7 PCIe Card Specifications on page 4 - 10 for PCIe specifications.

The PCle Card mounting material: Card Support.
 This item is supplied with the Box PC.

To install the PCIe Card:

- **1** Ensure the Box PC is OFF.
- 2 Remove the two crosshead screws 1 indicated with "open" and then pull up 2 the PCIe Drawer.

The indent at the side of the drawer will help you to pull the drawer from the Box PC.

**3** Pull the middle of the Card Clip to unlock it and remove it from the PCle Drawer.

**4** Remove the slot cover from the PCIe Drawer. The thin sheet metal frame should stay in the PCIe Drawer.

The slot cover is now removed.

**5** Place the PCle Card in the PCle Drawer.

Ensure to insert the PCIe Card in the correct opening.

Ensure the thin sheet metal frame is positioned between the PCIe Card and the PCIe Drawer to ensure a good conductive contact.

6 Place the Card Clip in the PCle Card and PCle Drawer 1 and then rotate the Clip 2 to lock it in place.

Slide the Card Support os that it supports the side of the PCIe Card.
The card should be in small groove so there is support below and above the card.
Rotate the Card Support to lock it in place.

8 Insert the PCIe Drawer in the Box PC and then insert the two crosshead screws that hold the PCIe Drawer in place.

**9** Remove the PCIe cover if the PCIe Card has external connectors.

- (1) Push the lock lever **1**.
- (2) Tilt the PCle cover 2.
- (3) Remove the PCIe cover 3.

The PCIe Card is installed.

## 5-3 Mount

This section describes how to mount the Box PC in either a book or wall orientation inside a control panel.

# riangle WARNING

Ensure that installation and post-installation checks of the product are performed by personnel in charge who possess a thorough understanding of the machinery to be installed.

#### 5-3-1 Installation Method in Control Panels

The Box PC Without Operating System must be mounted in a cabinet or a control panel. Consider the orientation, cooling distance, noise resistance, ducts and Box PC replacement when determining the space between the Box PC and other devices.

#### **Precautions for Safe Use**

Install the product in the correct orientation and temperature according to the specifications in the manual to prevent overheating. Not doing so may result in malfunction.

#### **Precautions for Correct Use**

Do not operate or store the product in the following locations. Operation may stop or malfunctions may occur.

- Locations subject to direct sunlight
- Locations subject to temperatures or humidity outside the range specified in the specifications
- Locations subject to condensation as the result of severe changes in temperature
- Locations subject to corrosive or flammable gases
- Locations subject to dust (especially iron dust) or salts
- · Locations subject to exposure to water, oil or chemicals
- · Locations subject to shock or vibration

#### **Additional Information**

- Ensure you have installed the options before you mount the product.
   Refer to 5-2 Install Options on page 5 5 for option details.
- Refer to 5-3-8 Book Mount Procedure on page 5 26 or 5-3-9 Wall Mount Procedure on page 5 27 for orientation details.
- Refer to 5-3-3 Temperature on page 5 15 for temperature details.
- Refer to 5-3-4 Humidity on page 5 18 for humidity details.
- Refer to 5-4 Wire on page 5 28 for wiring details.

### 5-3-2 Product Orientation

The Box PC can be mounted in a book (A) or wall (B) (C) orientation.

- For book mount there is one allowed orientation (A).
- For wall mount there are two allowed orientations, horizontally mounted <sup>®</sup> and vertically mounted <sup>©</sup>

Do not install the Box PC in other orientations.

### 5-3-3 Temperature

The temperature inside a control panel may be at least 10 to 15°C higher than outside the panel. Implement the following measures against overheating at the installation site and in the control panel, and allow a sufficient margin for the temperature.

## **Distance for Cooling**

Adequate airflow around the Industrial Box PC is required.

#### **Additional Information**

- The ambient temperature must be within the operating range.
   Refer to 4-3-1 Operation Environment Specifications on page 4 25 for temperature specifications.
- Allow space to accommodate for the bending radius of the cables.
   Refer to:
  - 2-9-5 DVI Cables on page 2 21
  - 2-9-6 USB Type-A to USB Type-B Cables on page 2 21
  - 2-9-7 NY Monitor Link Cables on page 2 22

for cable bending requirements.

Provide enough space for good air flow and ensure the following minimum distances are observed around the sides of the Box PC.

#### Book Mount

- Wall Mount in landscape  ${\color{orange} igo A}$  or portrait  ${\color{orange} igo B}$  orientation

| Item | Minimum distance *1 |
|------|---------------------|
| X    | 50 mm               |
| Υ    | 100 mm              |
| Z    | 50 mm               |

<sup>\*1.</sup> Measure the minimum distances X and Y at the air openings in the sides of the Box PC.

## **High Temperatures**

Use the following cooling methods as required, taking into account the ambient temperature and the amount of heating inside the panel.

#### Natural Cooling

Natural cooling relies on natural ventilation through slits in the panel, rather than using cooling devices such as fans or coolers. When using this method, observe the following points.

- Do not install the Box PC at the top of the panel, where hot air tends to stagnate.
- · To provide ventilation space above and below the Box PC, leave sufficient distance from other devices, wiring ducts, etc.
- Do not mount the Box PC in the wrong direction (e.g., vertically or upside down). Doing so may cause abnormal heating in the Box PC.
- Do not install the Box PC directly above any heat-generating equipment, such as heaters or transformers.
- · Do not install the Box PC in a location exposed to direct sunlight.

**Natural Cooling** 

### Forced Ventilation

Forced Ventilation Method

#### Forced Air Circulation

Forced circulation with a fan inside the closed control cabinet.

Forced Air Circulation

### Room Cooling

Cool the entire room where the control panel is located.

## **Low Temperatures**

The Box PC may not start normally if the temperature is below 0°C when the power is turned ON. Maintain an air temperature of at least 5°C inside the panel, by implementing measures such as installing a low-capacity space heater in the panel.

Alternatively, leave the Box PC power ON to keep the Box PC warm.

## 5-3-4 Humidity

Rapid temperature changes can cause condensation to occur, resulting in malfunctioning due to short-circuiting.

When there is a possibility of this occurring, take measures against condensation, such as leaving the Box PC power ON at night or installing a heater in the control panel to keep it warmer.

Examples of Measures against Condensation

## 5-3-5 Vibration and Shock

The Box PC is tested for conformity with the sine wave vibration test method (IEC 60068-2-6) and the shock test method (IEC 60068-2-27) of the Environmental Testing for Electrotechnical Products. It is designed so that malfunctioning will not occur within the specifications for vibration and shock. If, however, the Box PC is to be used in a location in which it will be directly subjected to regular vibration or shock, then implement the following countermeasures:

- Separate the Box PC control panel from the source of the vibration or shock. Or secure the Box PC and the control panel with rubber padding to prevent vibration.
- · Make the building or the floor vibration-resistant.
- Prevent shocks when other devices in the panel, such as electromagnetic contactors, operate. Secure either the source of the shock or the Box PC with rubber padding.

## 5-3-6 Atmosphere

Using the Box PC in any of the following locations can cause defective contact with connectors and corrosion of components. Implement countermeasures such as purging the air as required.

- In locations exposed to dust, dirt, salt, metal powder, soot, or organic solvents, use a panel with an airtight structure. Be careful of temperature increases inside the panel.
- In locations exposed to corrosive gas, purge the air inside the panel to clear the gas and then pressurize the inside of the panel to prevent gas from entering from outside.
- In locations where flammable gas is present, either use an explosion-protected construction or do not use the Box PC.

## 5-3-7 Electrical Environment

When installing or wiring devices, make sure that there will be no danger to people and that noise will not interfere with electrical signals.

## **Installation Location**

Install the Box PC as far away as possible from high-voltage (600 V or higher) and power devices to ensure safe operation and maintenance.

Example of Recommended Equipment Arrangement

Examples of Equipment Arrangement in Panel with High-voltage Devices

## **Hardware Arrangement**

The coils and contacts in electromagnetic contacts and relays in an external circuit are sources of noise. Do not install them close to the Box PC. Locate them at least 100 mm away from the Box PC.

**Example of Arrangement in Panel** 

## Wire Layout for the Power Supply

Observe the following points when wiring the power supply system.

- Separate the Box PC power supply from the I/O device power supply and install a noise filter near the Box PC power supply feed section.
- Use an isolating transformer to significantly reduce noise between the Box PC and the ground. Install the isolating transformer between the Box PC power supply and the noise filter, and do not ground the secondary coil of the transformer.
- Keep the wiring between the transformer and the Box PC as short as possible, twist the wires well, and keep the wiring separate from high-voltage and power lines.

Power Supply System Diagram

## Wire External I/O Signal Lines

Observe the following points when wiring the external I/O signal lines.

To absorb reverse electromotive force when an inductive load is connected to an output signal, connect a surge suppressor near the inductive load in an AC circuit, or connect a diode near the inductive load in a DC circuit.

Input Signal Noise Countermeasures

**Output Signal Noise Countermeasures** 

 Never bundle output signal lines with high-voltage or power lines, and do not route them in close proximity or parallel to such lines.

If output signal lines must be routed in close proximity to such lines, place them in separate ducts or conduits. Be sure to ground the ducts or conduits.

I/O Cable Arrangement

- If the signal lines and power lines cannot be routed in separate ducts, use shielded cable. Connect the shield to the ground terminal at the Box PC, and leave it unconnected at the input device.
- Wire the lines so that common impedance does not occur. Such wiring will increase the number of
  wires, so use common return circuits. Use thick wires with sufficient allowance for the return circuits,
  and bundle them with lines of the same signal level.
- For long I/O lines, wire the input and output signal lines separately.
- Use twisted-pair wires for pilot lamps (and particularly lamps with filaments).
- Use countermeasures, such as CR surge absorbers and diodes, for input device and output load device noise sources, as required.

## **External Wiring**

Wiring, and noise countermeasures in particular, are based on experience, and it is necessary to closely manage wiring based on experience and information in the manuals.

#### Wiring Routes

Each of the following combinations includes different signal types, properties, or levels. They will cause the signal-to-noise ratio to drop due to factors such as electrical induction. As a general rule when wiring, either use separate cables or separate wiring routes for these items. Future maintenance operations and changes to the system will also be made easier by carefully organizing the wiring from the start.

- · Power lines and signal lines
- · Input signals and output signals
- · Analog signals and digital signals
- · High-level signals and low-level signals
- · Communications lines and power lines
- · DC signals and AC signals
- · High-frequency devices (such as Inverters) and signal lines (communications)

#### (Routing of) Wiring

Observe the following points when wiring power supply and signal cables.

- When routing signal cables with differing characteristics through the same duct, always keep them separated.
- As much as possible, avoid routing multiple power supply lines through the same duct. If it cannot be avoided, then construct a partition between them in the duct and ground the partition.

Partitioning Methods for Signal and Power Supply Cables

 To avoid overheating the conduits when using conduits for wiring, do not place wires for a single circuit in separate conduits.

Parallel Wiring (Single Phase)

- · Power cables and signal cables adversely affect each other. Do not wire them in parallel.
- Noise induction may occur if the Box PC is installed in a panel that includes high-voltage devices. Wire and install them as far apart as possible.
- Either install the Box PC a minimum of 200 mm away from high-voltage lines or power lines, or place the high-voltage lines or power lines in metal tubing and completely ground the metal tubing to 100  $\Omega$  or less.

Example: Separating an OMRON product from Power Lines

## Wiring Ducts

Whenever possible, route the cables and wires through wiring ducts.

Install the wiring ducts so that it is easy to route the wires from the Box PC Without Operating System directly into the duct.

#### **Additional Information**

Refer to *Distance for Cooling* on page 5 - 15 for the minimum required distances.

It is convenient to use wiring ducts that have the same depth as the Box PC Without Operating System.

## 5-3-8 Book Mount Procedure

Use the following procedure to mount the Box PC Without Operating System in the book orientation.

#### **Additional Information**

- Refer to 5-4-2 Ground on page 5 29 for grounding details.
- Refer to 2-9-1 Mounting Brackets on page 2 19 for the bracket model.

To mount the Box PC:

**1** Mount the Bracket A to the Industrial Box PC C with the 6 Phillips screws B supplied with the brackets. Tighten these screws with a torque of 0.5 N·m.

- 2 Mount the Box PC with the bracket in position.
  - Drill the four holes at the location where the Box PC with bracket will be mounted. Refer to *4-1-8 Bracket Specifications* on page 4 12 for details.
  - Position the Industrial Box PC with bracket in the mounting location.

- Insert screws through the bracket into the mounting surface.
   Note that these screws are not in the scope of delivery.
- Tighten all four screws with a torque of 0.5 N·m.

The Box PC is mounted.

#### 5-3-9 Wall Mount Procedure

Use the following procedure to mount the Box PC in the wall orientation.

#### **Additional Information**

- Refer to 5-4-2 Ground on page 5 29 for grounding details.
- Refer to 2-9-1 Mounting Brackets on page 2 19 for the bracket model.

To mount the Box PC:

**1** Mount the Brackets A to the Industrial Box PC C with the 6 Phillips screws B supplied with the brackets.

Tighten these screws with a torque of 0.5 N·m.

- **2** Mount the Industrial Box PC with the brackets in position.
  - Drill the four holes at the location where the Box PC with brackets will be mounted. Refer to *4-1-8 Bracket Specifications* on page 4 12 for details.
  - · Position the Industrial Box PC with bracket in the mounting location.
  - Insert screws through the bracket into the mounting surface.
     Note that these screws are not in the scope of delivery.
  - Tighten all four screws with a torque of 0.5 N·m.

The Box PC is mounted.

## **5-4** Wire

This section describes how to wire the Box PC Without Operating System.

## 5-4-1 Wiring Warnings and Cautions

This section describes the Warnings and Cautions when wiring the Box PC Without Operating System.

# riangle WARNING

Provide safety measures in external circuits to ensure safety in the system if an abnormality occurs due to malfunction of the product or due to other external factors affecting operation. Not doing so may result in serious accidents due to incorrect operation.

# riangle WARNING

Emergency stop circuits, interlock circuit, limit circuits, and similar safety measures must be provided in external control circuits.

# riangle WARNING

Unintended behavior may occur when an error occurs in internal memory of the product. As a countermeasure for such problems, external safety measures must be provided to ensure safe operation of the system.

#### **Precautions for Safe Use**

Do not let metal particles enter the product when preparing the panel. Do not allow wire clippings, shavings, or other foreign material to enter any product. Otherwise, the product burning, failure, or malfunction may occur. Cover the product or take other suitable countermeasures, especially during wiring work.

### **5-4-2 Ground**

This section describes how to ground the Box PC Without Operating System.

# riangle WARNING

Always connect to a ground of 100  $\Omega$  or less when installing the product.

# **⚠** Caution

Never ground the 24 VDC side of the power supply. This may cause a short circuit.

The shielding of the communication connectors are directly bonded to the case and to the functional ground of the Box PC.

The shield of a communication cable should be terminated to ground at both ends of the cable with a low impedance connection. A large surface area surrounding the entire cable shield ensures a low impedance connection, avoid the use of pigtails.

Potential differences between the two connected communicating devices might cause an equipotential current to flow through the shielding connected at both ends.

To avoid equipotential currents on the cable shields, an additional equipotential bonding conductor must be installed.

Refer to IEC 61918 for guidelines regarding conductor sizing and length to prevent a voltage offset between two communicating devices exceeding 1 V.

Make sure to run the bonding conductor in close proximity to the communication cable.

## **Considerations for Earthing Methods**

Local potential fluctuations due to lightning or noise occurred by power devices will cause potential fluctuations between ground terminals of devices. This potential fluctuation may result in device malfunction or damage. To prevent this, it is necessary to suppress the occurrence of a difference in electrical potential between ground terminals of devices. You need to consider the earthing methods to achieve this objective.

The recommended earthing methods for each usage condition are given in the following table.

| Specification of commu-   | Earthing methods             |                 |                 |  |
|---|------------------------------|-----------------|-----------------|--|
| nications cables  | Equipotential bonding system | Star earthing   | Daisy chain     |  |
| The cable shield connected to the connector hood at both ends of the communications cable | Recommended                  | Not recommended | Not recommended |  |

#### **Additional Information**

- In a country or region where the earthing method is regulated, you must comply with the regulations. Refer to the applicable local and national ordinances of the place where you install the system, or other international laws and regulations.
- Ethernet switches are used with the EtherNet/IP. For information on the environmental resistance of the Ethernet switch to use, the grounding between Ethernet switches, or the specifications of cables, ask the Ethernet switch manufacturer.

Each of these earthing methods is given below.

## **Equipotential Bonding System**

Equipotential bonding is an earthing method in which steel frames and building structures, metal ducts and pipes, and metal structures in floors are connected together and make connections to the earth trunk line to achieve a uniform potential everywhere across the entire building. We recommend this earthing method.

The following figure shows an example of an equipotential bonding system.

Connect the main earthing terminal and building structures together with equipotential bonding conductors and embed the mesh ground line in each floor.

Connect the ground line of each control panel to the equipotential bonding system.

## **Star Earthing**

If the earthing method used for the building is not equipotential bonding or the earthing system is unknown, choose (a) from among the earthing methods given below.

(a) Connecting devices and noise sources to separate earth electrodes

This is an earthing method to separately ground an earth electrode of the device that is connected with a communications cable or other devices and an earth electrode of a high-power device that could be a noise source, such as a motor or inverter.

Each earth electrode must be ground to 100  $\Omega$  or less.

Connect the ground lines of the device that is connected with a communications cable and other devices as a bundle to a single earth electrode. Be sure that the earth electrode is separated by a minimum of 10 m from any other earth electrode of a device that could be a noise source.

(b) Connecting devices and noise sources to a common earth electrode

This is an earthing method to connect the device that is connected with a communications cable, other devices, and a device that could be a noise source, to a common earth electrode.

This earthing method is not recommended because the device that could be a noise source may interfere electromagnetically with other devices.

## **Daisy Chain**

This is an earthing method to connect the device that is connected with a communications cable, other devices, and a device that could be a noise source using a daisy-chain topology to a common earth electrode.

This earthing method is not recommended because the device that could be a noise source may interfere electromagnetically with other devices.

## **Ground Connection Details**

This section provides details about the ground connection.

Use the functional ground terminal on the mounting bracket(s) to ground your Industrial Box PC.

The washers and nut  $\bigcirc$  are supplied with the bracket(s).

Refer to Items Supplied with the Brackets on page 5 - 4 for details.

#### **Book Mount**

Mount the ground connection wire  $^{\textcircled{B}}$  to the functional ground terminal  $^{\textcircled{A}}$  using the washers and nut  $^{\textcircled{C}}$ . Tighten the nut with a torque of 1.2 N·m max.

Refer to 5-3-8 Book Mount Procedure on page 5 - 26 for book mounting details.

#### **Wall Mount**

Mount the ground connection wire B to the functional ground terminal A using the washers and nut C. Tighten the nut with a torque of 1.2 N·m max.

Refer to 5-3-9 Wall Mount Procedure on page 5 - 27 for wall mounting details.

## Crimp terminals

Use crimp terminals with dimensions X = M4 and Y = 8 mm max.

### 5-4-3 Wire the Power Connector

This section describes how to wire the power connector.

#### **Precautions for Safe Use**

- Do not perform a dielectric strength test.
- Always use the recommended uninterruptible power supply (UPS) to prevent data loss and
  other system file integrity issues caused by unexpected power interruption. Back up the system files in the planned way to prevent data loss and other system file integrity issues caused
  by incorrect operation.

#### **Additional Information**

- The selected conductor size must match with the used maximum power supply capacity or an overcurrent protection device must be used.
- The used wires and the overcurrent protection device must meet the applicable national standards.

Standards are:

- NEC (National Electric Code)
- CEC (Canadian Electrical Code)
- · international applicable standards
- Refer to 4-1-2 General Electrical Specifications on page 4 3 for electrical specifications.
- Refer to 4-1-3 Power Consumption Specifications on page 4 4 for power consumption specifications.
- Refer to 2-9-10 UPS on page 2 24 for UPS information.

## **Power Connector Wiring Materials**

Use the power supply connector that was supplied to connect the power supply to the Box PC Without Operating System.

- Select power supply conductors with consideration to the voltage drop and heat generation for the cable length at the installation environment.
- Always use twisted wires to minimize the occurrence of electrical disturbance.
- · Recommended power supply conductor sizes are provided in the table.

| Wire type  | Conductor cross-section   |
|--|---------------------------|
| Solid conductor  | 0.5 to 10 mm <sup>2</sup> |
| Flexible conductor                                     | 0.5 to 6 mm <sup>2</sup>  |
| Flexible conductor, with ferrule and no plastic sleeve | 0.5 to 6 mm <sup>2</sup>  |
| Flexible conductor, with ferrule and plastic sleeve    | 0.5 to 4 mm <sup>2</sup>  |
| Minimum AWG according to UL/cUL                        | 20                        |
| Maximum AWG according to UL/cUL                        | 8                         |

Power Supply Connector

## **DC Power Supply**

The OMRON S8VK-series power supply is recommended for use with the Box PC Without Operating System.

#### **Additional Information**

- Refer to 2-9-9 Power Supply on page 2 23 for more information.
- Refer to 4-1-3 Power Consumption Specifications on page 4 4 for power consumption details.

## **Power Connector Wiring Procedure**

Use the following procedure to wire the power connector.

**1** Remove the sheath from the power supply wires.

#### **Precautions for Safe Use**

Observe the following precautions to prevent broken wires.

- When you remove the sheath, be careful not to damage the conductor.
- · Connect the conductor without twisting the wires.
- Do not weld the conductors. Doing so may cause the wires to break with vibration.
- Insert a screwdriver in the small opening above the cable opening to unlock the cable entry and then push the wire all the way to the back of the cable opening .

| Pin | Description |
|-----|-------------|
| 1   | 24 VDC      |
| 2   | 0 VDC       |

**3** Remove the screwdriver.

Do not apply stress to the cable after you have connected the wires.

## 5-4-4 Wire the I/O Connector

This section describes how to wire the I/O connector.

## I/O Connector Wiring Materials

Use the supplied I/O connector to connect the inputs and outputs to the Box PC Without Operating System.

Recommended I/O conductor sizes for the connector are provided in the table.

| Wire type  | Conductor cross-section      |
|--|------------------------------|
| Solid conductor  | 0.2 to 1.5 mm <sup>2</sup>   |
| Flexible conductor                                     |                              |
| Flexible conductor, with ferrule and no plastic sleeve | 0.25 to 1.5 mm <sup>2</sup>  |
| Flexible conductor, with ferrule and plastic sleeve    | 0.25 to 0.75 mm <sup>2</sup> |
| Minimum AWG according to UL/cUL                        | 24                           |
| Maximum AWG according to UL/cUL                        | 16                           |

- Refer to I/O Connector Power Status Output Details on page 4 16 for power status output details.
- Refer to 5-8 Connect UPS on page 5 49 for UPS connection details.

## I/O Connector Wiring Procedure

Use the following procedure to wire the I/O connector.

#### **Precautions for Safe Use**

Observe the following precautions to prevent broken wires.

- · When you remove the sheath, be careful not to damage the conductor.
- · Connect the conductor without twisting the wires.
- Do not weld the conductors. Doing so may cause the wires to break with vibration.
- **2** Remove the I/O connector from the Box PC.
- 3 Insert a screwdriver in the small groove above the cable entry 1 to unlock the cable entry and then push the wire all the way to the back of the cable opening 2.

**4** Remove the screwdriver.

Do not apply stress to the cable after you have connected the wires.

# 5-5 Connect

This section describes how to connect the Box PC Without Operating System.

## 5-5-1 Connector Identification

The Industrial Box PC connectors are shown below.

| Item | Name   | Description  |
|------|--|--|
| Α    | Power connector  | Lockable power connector   |
| В    | I/O connector  | 2 inputs (UPS signal and power OFF control) and 1 output (Industrial Box PC power state)   |

### 5-5-2 Connection Procedure

Use the following procedure to connect the Box PC Without Operating System.

Ensure the Box PC is securely fastened to the mounting surface.

Ensure the mounted Box PC can be connected to power and peripheral devices. Remove dust covers where applicable and store them in a safe place.

#### **Additional Information**

- Refer to 5-3 Mount on page 5 14 for mounting details.
- · Refer to:
  - 2-9-5 DVI Cables on page 2 21
  - 2-9-6 USB Type-A to USB Type-B Cables on page 2 21
  - 2-9-7 NY Monitor Link Cables on page 2 22
  - · individual cable specifications

for cable bending requirements and connector clearance.

Use the following procedure to connect the Box PC:

- **1** Ensure the ground terminal is connected. Refer to *5-4-2 Ground* on page 5 - 29 for grounding details.
- **2** Connect the power connector A.

  Hold the black part to enable the auto-locking mechanism.

Do not push the orange sliders <sup>®</sup> in the direction of the Box PC because this will unlock the connector.

**3** Connect the I/O connector.

Hold the black part (A) when inserting the connector, this enables the auto-locking mechanism.

Do not tilt the orange levers <sup>(B)</sup> because this will unlock the connector.

Connect an external monitor such as the Industrial Monitor.

Connect the monitor to the DVI interface and tighten the fastening screws or use the optional NYML connector.

For an Industrial Panel PC this is optional because a monitor is integrated.

- **5** Connect a device to the optional interface (DVI, RS-232C or NYML) if applicable and tighten the fastening screws when applicable.
- **6** Connect the USB ports to peripheral devices .
- 7 Connect the Box PC to the required Ethernet interface connector(s).
  Refer to 4-2-4 Ethernet Connector Specifications on page 4 19 for Ethernet port details.
  The Box PC is connected.

## 5-6 Initial Power ON

This section describes how to Power ON the Box PC Without Operating System for the first time.

# riangle WARNING

Ensure that installation and post-installation checks of the product are performed by personnel in charge who possess a thorough understanding of the machinery to be installed.

#### 5-6-1 Initial Power ON Procedure

Use the following procedure to power ON the Box PC Without Operating System for the first time.

- **1** Ensure the following conditions are present before applying power for the first time:
  - · The Box PC is securely fastened to the mounting surface.
  - The Box PC is connected to ground.
  - · All connectors are securely fastened.
- **2** Ensure that the connected monitor(s) is powered ON.
- **3** Connect a keyboard and/or a mouse.

#### **Additional Information**

- If using an OMRON Industrial Monitor this may not be required because it has touch functionality.
- Do not connect additional storage devices before the installation of the operating system completed. Adding storage devices like a USB flash drive, an SD memory card or a PCIe card might influence the default drive letter sequence.
- **4** Ensure the power supply is ON.

#### **Precautions for Safe Use**

Always check the power supply and power connections before applying power. Incorrect power connections can damage the product or cause burning.

**5** Press the power button and release within 1 second.

Refer to 2-3 Power Button on page 2 - 8 for the power button location.

The Box PC starts and the PWR LED will go ON.

#### **Additional Information**

- Do not connect or disconnect the DVI-D cable while power is supplied to the Box PC.
- If a Windows operating system is preinstalled:
  - · the Windows configuration will automatically start
  - · refer to Windows Startup First Time for details
- **6** Verify the ERR LED is OFF.

The Box PC is ON and if an operating system is installed it will start.

#### **Precautions for Safe Use**

Always use the SMART monitoring feature for storage devices that do not comply to the Omron Storage Device Specifications. Monitor the operating temperature and vibrations to ensure they stay within the environmental specifications of the storage device.

#### **Additional Information**

- The first time initialization will prepare the system and automatically reboot the Box PC when required.
- Install support software to fully utilize your Box PC and optional connected hardware like the Industrial Monitor.

# 5-7 Install Software

This section describes how to install the software for the Box PC Without Operating System.

#### 5-7-1 Drivers and Custom Software

Use the following procedure to install drivers and custom software on your Box PC Without Operating System.

- For an Industrial PC without Operating System download the drivers from the OMRON download website
- For an Industrial PC with a Windows operating system the drivers for most OMRON devices and common third party devices are already available on the product. They will be installed automatically after the initial Windows configuration or upon connection of a device to the Box PC.
  - **1** Install drivers that are required for the application.
  - Install third-party software that is required for application.
    Follow the installation instructions as supplied with the driver or software.

#### **Precautions for Safe Use**

Before operating the system, please make sure the appropriate software is installed and configured. Doing so may prevent unexpected operation.

# 5-8 Connect UPS

The OMRON S8BA UPS protects the Box PC from power failures, voltage variations and instantaneous voltage drops. Short power interruptions will be backed up by the UPS and the Box PC will continue normal operation. The UPS signals the Box PC when a power failure occurs and then the Box PC will shutdown normally without data loss. The Box PC can automatically start up again when the power is restored.

# riangle WARNING

The use of an uninterruptible power supply (UPS) allows normal operation to continue even if a momentary power failure occurs, possibly resulting in the reception of an erroneous signal from an external device affected by the momentary power failure. Take external fail-safe measures. Where necessary, monitor the power supply voltage on the system for external devices and use it as an interlock condition.

#### **Precautions for Safe Use**

- Always use an uninterruptable power supply (UPS) to prevent data loss and other system file integrity issues caused by unexpected power interruption.
- Use an Omron S8BA UPS with the correct revision number to prevent improper system shutdown.
- Correctly perform wiring and setting, and ensure that the shutdown by the UPS can be executed.

#### **Additional Information**

- The minimum power requirements of the UPS are dependent on the power consumption.
   Refer to 4-1-3 Power Consumption Specifications on page 4 4 for power consumption details.
- Refer to the OMRON website for S8BA specifications and for the UPS S8BA User's Manual (Cat. No. U702).
  - Note that the power consumption details determine the output current/capacity of your UPS.

## 5-8-1 Connect UPS Using the USB Connector

The Simple Shutdown Software monitors the UPS status via the USB interface and shuts down the Box PC Without Operating System when needed.

UPS Drivers and the required software can be downloaded from the OMRON download site:

- · Drivers for the S8BA UPS
- · Installation files for the Simple Shutdown Software
- · Installation files for the UPS Setting Utility (Windows only)

#### **Precautions for Safe Use**

- Always use an uninterruptible power supply (UPS) to prevent data loss and other system file integrity issues caused by unexpected power interruption.
- Use an Omron S8BA UPS with the correct revision number to prevent improper system shutdown.
- Correctly perform wiring and setting, and ensure that the shutdown by the UPS can be executed.

Follow the steps below to connect the S8BA UPS with a USB cable and to configure it correctly.

- **1** Ensure the revision number of the UPS is correct. Refer to *2-9-10 UPS* on page 2 - 24 for more information.
- **2** Download the above mentioned software.
- **3** Wire the S8BA UPS.
  - (1) Wire the input of the UPS to the output of the Power Supply.
  - (2) Wire the output of the UPS to the power connector of the Box PC.
  - (3) Ground the UPS.
  - (4) Connect the USB port of the S8BA UPS to the USB port of the Box PC using the USB cable provided with the S8BA UPS.

Refer to the UPS S8BA User's Manual (Cat. No. U702) for details.

Refer to 5-4-3 Wire the Power Connector on page 5 - 36 for Power Connector details.

**4** Supply power to the Power Supply.

- **5** Press and hold the UPS power button until **On** appears on the UPS display.
- **6** Power ON the Box PC and then wait until the device drivers are successfully installed.
- 7 Configure the UPS using the UPS Settings Utility.
- 8 Install the Simple Shutdown Utility.
- **9** Configure the Simple Shutdown Utility.
- **10** Configure the Box PC to auto-start after power loss within the BIOS settings.
  - Refer to A-1-1 BIOS Overview on page A 2 for details on BIOS changes.
  - Refer to A-1-5 BIOS Boot on page A 9 for power loss BIOS details.
- 11 Simulate a power interruption and confirm a correct shutdown of the Box PC.
  - · Start the Box PC
  - · Start applications
  - Create a power interruption
  - · Monitor the shutdown sequence and confirm a correct shutdown sequence

The UPS is connected and configured.

The Box PC will shut down properly in case of a power supply interruption and restart automatically when the power is restored.

#### **Additional Information**

- The default Input sensitivity setting is Standard voltage sensitivity and this is correct.
   Do not set this parameter to Low voltage sensitivity. Doing so can cause a system malfunction when switching to battery mode.
- The UPS Setting Utility can not be used when the Simple Shutdown Software is active. To use the UPS Setting Utility:
  - (1) Right-click the Simple Shutdown icon and select Agent Stop.
  - (2) Use the UPS Setting Utility.
  - (3) Right-click the Simple Shutdown icon and select Agent Start.

## 5-8-2 Connect UPS Using the I/O Connector

The I/O connector of the Box PC Without Operating System:

- receives the power status of the UPS with the UPS Mode Input when the Box PC has a Windows operating system. For other operating systems this input is not functional.
- indicates the power status of the Box PC to the UPS with the Power Status Output.

#### **Additional Information**

- A UPS connection using the I/O connector is only possible for a Box PC with a Windows operating system. For all other operating systems use the USB connector to connect the UPS. Refer to 5-8-1 Connect UPS Using the USB Connector on page 5 50 for details.
- The Box PC does not react automatically to the UPS Mode Input. A custom software program is required to shut down the Box PC when needed.

UPS Drivers and the required software can be downloaded from the OMRON download site:

- Drivers for the S8BA UPS
- · Installation files for the UPS Setting Utility (Windows only)

#### **Precautions for Safe Use**

- Always use the recommended uninterruptible power supply (UPS) to prevent data loss and other system file integrity issues caused by unexpected power interruption.
- Use an Omron S8BA UPS with the correct revision number to prevent improper system shutdown.
- Correctly perform wiring and setting, and ensure that the shutdown by the UPS can be executed.

Follow the steps below to connect the S8BA UPS to the I/O connector of the Box PC and to configure it correctly.

- **1** Ensure the revision number of the UPS is correct. Refer to 2-9-10 UPS on page 2 - 24 for more information.
- **2** Download the above mentioned software.
- **3** Wire the S8BA UPS.
  - (1) Wire the input of the UPS to the output of the Power Supply.
  - (2) Wire the output of the UPS to the power connector of the Box PC.
  - (3) Ground the UPS.
  - (4) Connect the Contact port of the S8BA UPS to the I/O port of the Box PC with the connection cable S8BW-02.

Refer to the UPS S8BA User's Manual (Cat. No. U702) for details.

Refer to 5-4-3 Wire the Power Connector on page 5 - 36 for Power Connector details.

Refer to 5-4-4 Wire the I/O Connector on page 5 - 39 for I/O Connector details.

- 4 Power ON the Box PC.
- **5** Configure the UPS.
  - (1) Connect the USB cable supplied with the UPS to the USB connector of the UPS and to the USB connector of the Box PC.
  - (2) Configure the UPS using the UPS Settings Utility.
  - (3) Remove the USB cable between the UPS and the Box PC.
- **6** Configure the Box PC to auto-start after power loss within the BIOS settings.
  - Refer to A-1-1 BIOS Overview on page A 2 for details on BIOS changes.
  - Refer to A-1-5 BIOS Boot on page A 9 for power loss BIOS details.
- 7 Create a software program that monitors the UPS Mode Input and initiates Power OFF of the Box PC when the UPS Mode Input becomes active.

Use the Industrial PC System API to obtain the UPS Mode Input status.

Refer to NY-series Software Development Kit User's Manual for Industrial PC System API details.

- 8 Install the created software program.
- **9** Test the created software program and ensure it functions correctly.
- $m{10}$  Simulate a power interruption and confirm a correct shutdown of the Box PC.
  - · Start the Box PC
  - · Start applications
  - · Create a power interruption
  - · Monitor the shutdown sequence and confirm a correct shutdown sequence

The UPS is connected and configured.

The Box PC will shut down properly in case of a power supply interruption and restart automatically when the power is restored.

## **Additional Information**

The default **Input sensitivity setting** is **Standard voltage sensitivity** and this is correct. Do not set this parameter to **Low voltage sensitivity**. Doing so can cause a system malfunction when switching to battery mode.

# **Operating Procedures**

This section provides the operating procedures for the Box PC Without Operating System.

| 6-1 | Powe      | r ON   | 6 - 2 |

|     | 6-2-4     | Forced Power OFF Using the Power Button        | 6 - 4 |

## 6-1 Power ON

This section provides Power ON details.

## 6-1-1 Power ON Using the Power Button

Start condition: Power is supplied to the Box PC and the Box PC is OFF.

- **1** Press the power button and release within 1 second. Refer to 2-3 Power Button on page 2 - 8 for the power button location. The Box PC starts and the PWR LED will turn ON.
- **2** Wait until the PWR LED is ON and verify that the ERR LED is OFF. The Box PC is ON and the Operating System, if installed, starts.

## 6-1-2 Power ON Using the Power ON/OFF Input

Start condition: Power is supplied to the Box PC and the Box PC is OFF.

- Supply an input signal to pins 3 and 4 of the I/O connector.
  The input signal must remain ON for a minimum of 60 ms and a maximum of 750 ms to be correctly detected by the Box PC.
  The Box PC starts and the PWR LED will turn ON.
- **2** Wait until the PWR LED is ON and verify that the ERR LED is OFF. The Box PC is ON and the Operating System, if installed, starts.

#### **Additional Information**

- Refer to 4-2-2 I/O Connector Specifications on page 4 14 for connector specifications.
- Refer to 5-4-4 Wire the I/O Connector on page 5 39 for wiring details.

## 6-1-3 Auto Power ON

The Box PC can be configured to start up when power is supplied to the power connector.

The Power Loss Control BIOS setting controls this behavior.

Set the Power Loss Control setting to **Turn ON** to activate the Auto Power ON function.

#### **Additional Information**

Refer to A-1-5 BIOS - Boot on page A - 9 for BIOS details.

# 6-2 Power OFF

This section provides Power OFF details.

Before following power OFF procedures below, check that the Box PC Without Operating System is ON by examining the LED indicators on the Box PC.

## 6-2-1 Power OFF Using the Operating System Shut Down

- **1** Ensure all programs are closed. If required close all active programs.
- **2** Select **Shut down** of the Operating System. The Box PC will shut down.
- **3** Wait until the PWR LED is OFF.

The Box PC is powered OFF.

## 6-2-2 Power OFF Using the Power Button

- **1** Ensure all programs are closed. If required close all active programs.
  - Press and release the power button on the Box PC Without Operating System within 1 second. The Box PC Without Operating System will shutdown.

    Note that this behaviour of can be reconfigured with the Power Options settings.

    Refer to 2-3 Power Button on page 2 8 for power button location information.
- **3** Wait until the PWR LED is OFF.

The Box PC is powered OFF.

### **Additional Information**

The Box PC will restart automatically if a UPS is connected to the I/O connector of the Box PC. Use the Power button of the UPS or remove the input power from the UPS for a normal shutdown of the Box PC.

## 6-2-3 Power OFF Using the Power ON/OFF Input

- **1** Ensure all programs are closed. If required, close all active programs.
- Supply a 24 VDC signal to the Power ON/OFF Input (pins 3 and 4) of the I/O connector. The input signal must remain ON for a minimum of 60 ms and a maximum of 750 ms to be correctly detected by the Box PC Without Operating System.

The Box PC Without Operating System will shutdown.

Note that this behaviour can be reconfigured with the Power Options settings.

**3** Wait until the PWR LED is OFF.

The Box PC is powered OFF.

#### **Additional Information**

- Refer to 4-2-2 I/O Connector Specifications on page 4 14 for connector specifications.
- Refer to 5-4-4 Wire the I/O Connector on page 5 39 for wiring details.

## 6-2-4 Forced Power OFF Using the Power Button

#### **Precautions for Safe Use**

Press the power button for several seconds to force the product shutdown. Always back up files in the planned way to prevent data loss or system file corruption.

- 1 Ensure all programs are closed.
  If required, close all active programs to prevent losing unsaved data.
- Press and hold the power button on the Box PC for 5 to 10 seconds.
  Refer to 2-3 Power Button on page 2 8 for power button location information.
  The Box PC Without Operating System will power OFF.
  Any optional operating system settings related to power OFF will be disregarded.
- **3** Wait until the PWR LED is OFF.

The Box PC is powered OFF.

Confirm normal operation and check all product settings because unsaved data was lost.

# **Maintenance**

This section provides an overview of all maintenance tasks for the Box PC Without Operating System.

## 7-1-2 Clean the Box PC

Clean the Box PC periodically in order to keep it in the best operating condition. Wipe the Box PC with a dry, soft cloth.

#### **Precautions for Safe Use**

Do not use corrosive substances to clean the product. Doing so may result in the failure or malfunction.

## 7-1-3 Keep Software Updated

Always keep software at the latest released version to ensure stable operation.

This is specifically important for:

- · Internet browser
- · Operating system security patches
- · OMRON software

#### **Precautions for Correct Use**

After an OS update or a peripheral device driver update for the product is executed, the product behavior might be different. Confirm that operation is correct before you start actual operation.

# 7-2 Corrective Maintenance

Corrective maintenance covers all actions to correct problems that cause downtime.

# riangle WARNING

Do not attempt to disassemble, repair, or modify the product in any way. Doing so may result in malfunction or fire.

Contact your local OMRON representative if the corrective maintenance actions did not solve the problem.

## 7-2-1 Warning and Error Messages

Warning and Error messages are provided by the Box PC Without Operating System when there is a potential problem that may cause downtime. This section provides details about these messages. Warning messages inform you about a situation that will lead to downtime of the Box PC Without Operating System.

Error messages inform you about what caused the downtime of the Box PC Without Operating System.

The following message channels are available.

## **LED Indicators**

The ERR LED indicator provides information on warnings and errors.

#### **Additional Information**

Refer to 2-2-2 ERR LED Indicator on page 2 - 7 for ERR details.

## 7-2-2 Remove the Cover

The Cover of the Box PC Without Operating System provides access to the following items.

- Battery
- Fan Unit (applies to products with active cooling)

The inside of the Cover contains the following information.

- · Battery replacement date
- · License key for the operating system (optional)

No tools are required to open the Cover.

Use the following procedure to remove the Cover of the Box PC.

7

Power OFF your Box PC if it has active cooling.

### **Precautions for Safe Use**

Do not remove the fan cover while the power is ON. Contact with the rotating fan may result in injury.

**2** Remove the Cover.

- (1) Pull the lever 1 to unlock the Cover.
- (2) Lift the side 2 to tilt the Cover.
- (3) Remove 3 the complete Cover.

The Cover is removed.

To mount the Cover, position the side of the Cover in the Box PC and push the cover in place. The lever will lock in place.

## 7-2-3 Replace the Fan Unit

The fans are mounted in the Fan Unit.

Use the following procedure to replace the Fan Unit.

#### **Precautions for Safe Use**

If the replacement Fan Unit has been stored over 6 months then check the performance of the Fan Unit after replacement.

#### **Additional Information**

Refer to 2-8-2 Fan Unit on page 2 - 17 for the model.

- **1** Power OFF the Box PC.
- **2** Remove the Cover of the Box PC.

#### **Additional Information**

Refer to 7-2-2 Remove the Cover on page 7 - 6 for the cover removal procedure.

**3** Disconnect the Fan Connectors from the board.

**4** Replace the complete Fan Unit.

- (1) Push the lever 1 to unlock the Fan Unit.
- (2) Lift the lever to tilt 2 the Fan Unit.
- (3) Remove 3 the complete Fan Unit.
- 5 Insert the new Fan Unit in the Box PC.

  Ensure the end of the Fan Unit (A) is positioned under the fan guide (B).

- **6** Connect the Fan Connectors to the board.
- **7** Mount the Cover.
- **8** Power ON the system.

  Confirm both fans rotate immediately after Power ON.

The fans are replaced and the alarm is automatically reset.

## 7-2-4 Replace the Battery

#### **Precautions for Safe Use**

- The Battery may leak, rupture, heat, or ignite. Never short-circuit, charge, disassemble, heat, or incinerate the Battery or subject it to strong shock.
- Dispose of any Battery that has been dropped on the floor or otherwise subjected to excessive shock. Batteries that have been subjected to shock may leak if they are used.
- UL standards require that only an experienced engineer replace the Battery. Make sure that an experienced engineer is in charge of Battery replacement.

#### **Precautions for Correct Use**

- Always touch a grounded piece of metal to discharge static electricity from your body before starting an installation or maintenance procedure.
- Make sure to use a battery of the correct type and install the battery properly.
- Apply power for at least five minutes before changing the battery. Mount a new battery within
  five minutes after turning OFF the power supply. If power is not supplied for at least five minutes, the clock data may be lost. Check the clock data after changing the battery.
- Turn ON the power after replacing the battery for a product that has been unused for ax extended period of time. Leaving the product unused without turning ON the power even once after the battery is replaced may result in a shorter battery life.

#### **Additional Information**

- Refer to 2-8-1 Battery on page 2 17 for the battery model.
- UL standards require that batteries be replaced by experienced technicians.
   Always place an experienced technician in charge of battery replacement.

Use the following procedure to replace the battery:

#### **Additional Information**

Refer to 7-2-2 Remove the Cover on page 7 - 6 for the cover removal procedure.

- **3** Lift the battery **1** from the compartment.
- **4** Disconnect the battery from the battery connector **2**.

- **5** Connect the new battery to the battery connector.
- Place the new battery in the Box PC.

  Ensure the wires are at the side of the battery and not on top of the battery. If the wires are on top of the battery this might make closing and opening the cover more difficult.
- **7** Write the next date of replacement on the label at the inside of the cover.

### **Additional Information**

Refer to 2-8-1 Battery on page 2 - 17 for lifetime of the battery.

- **8** Mount the cover.
- **9** Remove the power connector for at least 3 seconds to reset the battery warning.
- **10** Power ON the Box PC.
- **11** Check the Date and Time in the operating system. Correct the Date and Time if this is required.

The battery is replaced and the alarm is reset.

## 7-2-5 Replace a Drive

Use the following procedure to replace a drive.

Prepare the new drive.

#### **Additional Information**

- Refer to 1-4 Product Configuration on page 1 5 for the installed drive model.
- Refer to 2-9-4 Storage Devices on page 2 20 for the available drive models.
- Refer to 4-1-6 Storage Device Specifications on page 4 8 for drive specifications.

To replace a drive:

- **1** Power OFF the Box PC.
- **2** Remove the drive cover.

- (1) Push the lock lever 1.
- (2) Tilt the cover 2.
- (3) Remove the drive cover 3.

#### **Additional Information**

- Refer to 2-4 Drive Bays on page 2 9 for the location of the drive cover.
- The Box PC has 2 drive bays, marked with "A" and "B" at the left side of the drive cover. Take
  note of the bay position for the drive that is being removed and do not place a drive in the
  incorrect bay.

**3** Pull the metal shielding cover out of the Box PC.

4 Insert the drive cover in the drive bracket bay 1 and move it down 2 so that it locks in the drive bracket.

6 Remove the 4 mounting screws 1 and then remove the drive 2 from the drive bracket.

**7** Align the connectors of the replacement drive as shown ⓐ on the bracket. Then insert the replacement drive **1** in the bracket and insert the 4 mounting screws **2**. Tighten these screws with a torque of 0.35 N⋅m.

8 Insert the bracket with the replacement drive into the correct bay of the Box PC. Ensure the bracket is completely in the Box PC with an extra push.

The drive bracket will lock into place when it is fully inserted.

**9** Insert the metal shielding cover.

## **10** Mount the drive cover.

The lock lever will click when closed correctly.

# **11** Restore the drive data.

- For products NYB□ and NYP□:
  - For an Industrial PC with RTOS Controller restore the drive data from a backup.
  - For an Industrial PC without Operating System restore the drive data from a backup.
  - For an Industrial PC with a Windows operating system refer to the restore procedure in the section *Corrective Maintenance* to restore data.
- For products *NY512-A*□ refer to the restore procedure in the section *Corrective Maintenance* to restore data.
- For products NY512-1□ refer to the NY-series IPC Machine Controller Industrial Panel PC / Industrial Box PC Setup User's Manual (Cat. No. W568) to restore data from a backup.

## 12 Finalize the drive replacement.

If the Box PC has a Windows operating system and the storage drive is not visible in Windows then the drive needs to be allocated.

The drive is replaced.

## 7-2-6 Replace the PCIe Card

Use the following procedure to replace the PCIe Card.

#### Prepare:

· The PCIe Card

## **Additional Information**

Refer to 4-1-7 PCIe Card Specifications on page 4 - 10 for PCIe specifications.

 The PCIe Card mounting materials: Card Clip and Card Support These are supplied with the Box PC Without Operating System.

To replace the PCIe Card:

- **1** Power OFF the system.
- **2** Unmount the Box PC.
- **3** Remove the two crosshead screws **1** indicated with "open" and then pull up **2** the PCle Drawer.

The indent at the side of the drawer will help you to pull the drawer from the Box PC.

**4** Push the notch **1** at the bottom of the Card Support up and rotate **2** the Card Support. Slide the Card Support **3** away from the card to create space and to remove it.

**5** Pull the middle of the Card Clip to unlock it and remove it from the PCle Drawer.

**6** Remove the PCIe Card from the PCIe Drawer.

The PCIe Card is now removed.

7 Place the replacement PCIe Card in the PCIe Drawer.

Ensure the PCIe Card is inserted into the correct opening.

Place the Card Clip in the PCIe Card and PCIe Drawer and then rotate the Clip to lock it in place.

9 Slide the Card Support • so that it supports the side of the PCle Card.
Rotate the Card Support • to lock it in place.

Ensure the Card Support contacts the PCle Card with the small groove so that there is support below and above the PCle Card.

10 Insert the PCIe Drawer in the Box PC and then insert the two crosshead screws that hold the PCIe Drawer in place.

**11** Remount the Box PC.

**12** Confirm normal operation. The PCIe Card is replaced.

# A-1 BIOS

This section provides the BIOS information of the Box PC Without Operating System.

# riangle WARNING

Changing BIOS information is only allowed for the engineer in charge that possesses a thorough understanding of the BIOS settings because it can change the behavior of the product.

### A-1-1 BIOS Overview

The BIOS contains settings that influence the behavior of the Box PC Without Operating System.

The touchscreen functionality is not functional when working in BIOS.

Ensure a USB keyboard is connected.

## **BIOS Setup Program**

Press the **DEL** or **F2** key repeatedly directly after Power ON to access the BIOS Setup Program.

## **Boot Selection Popup Menu**

Press the **F11** key repeatedly directly after Power ON to display the Boot Selection Popup menu.

The popup menu allows selection of the boot device and the option to enter the BIOS setup program.

## **BIOS Structure**

The BIOS contains a menu bar, a left frame and a right frame.

The left frame displays all the options that can be configured in the selected menu.

The left frame uses following colors:

- Blue = Configurable options
- Greyed-out = Not configurable
- Inverse white = Selected

The right frame displays the key legend. Above the key legend is an area reserved for text messages.

These text messages explain the options and the possible impacts when you change the selected option in the left frame.

Use the  $\rightarrow \leftarrow$  keys to navigate between pages.

The menu bar gives access to following pages with settings:

• Main

Refer to A-1-2 BIOS - Main on page A - 4 for Main details.

Advanced

Refer to A-1-3 BIOS - Advanced on page A - 4 for Advanced details.

Chipset

Refer to A-1-4 BIOS - Chipset on page A - 8 for Chipset details.

Boot

Refer to A-1-5 BIOS - Boot on page A - 9 for Boot details.

Security

Refer to A-1-6 BIOS - Security on page A - 10 for Security details.

Save & Exit

Refer to A-1-7 BIOS - Save & Exit on page A - 10 for Save and Exit details.

## **BIOS - Navigation and Function Keys**

The right part of the BIOS screens is divided in two parts.

Top part.

Provides additional information on selected screens or parameters.

Bottom part.

Provides information on Keys.

· Enter: Select

Selects the parameter that has the focus and displays a submenu or the possibility to change the parameter.

• + / -: Change Option

Change settings. A numerical value will be increased or decreased. A boolean value will toggle.

• F1: General Help

Displays help information.

• F2: Previous Values

Changes all parameters to the values they had when entering the BIOS.

· F9: Optimized Defaults

Changes all settings to the default values.

• F10: Save & Exit

Saves all changes and exits the BIOS.

• ESC: Exit

Go one level up. For parameters this is the previous level. For the main pages this exits the BIOS.

## **BIOS Password & Write Protection**

A BIOS password protects the BIOS setup program from unauthorized access. This ensures that users cannot change the system configuration without authorization. With an assigned BIOS password, the BIOS prompts the user for a password on a setup entry. If the password entered is wrong, the BIOS setup program will not launch.

The BIOS uses encryption for the password.

The BIOS password is case sensitive with a minimum of 3 characters and a maximum of 20 characters. Once a BIOS password has been assigned, the BIOS activates the grayed out **BIOS Update and Write Protection** option. If this option is set to **enabled**, only authorized users (users with the correct password) can update the BIOS. With the BIOS password protection and the BIOS update and write protection, the system configuration is completely secured. If the BIOS is password protected, you cannot change the configuration of an end application without the correct password.

## A-1-2 BIOS - Main

The main setup screen gives platform information about the BIOS, Board Information, Firmware Revision, MAC Addresses and information about the number of Boots and the Running Time.

Changeable BIOS Main parameters and their factory default values:

- System Date
   Use the Enter key to the next Date field.
- System Time
   Use the Enter key to the next Time field.

## A-1-3 BIOS - Advanced

This section provides advanced BIOS information.

#### A-1-7 BIOS - Save & Exit

Provides the possibility to leave the BIOS with or without saving changes.

Save & Exit Parameters: Disabled.

Save Changes and Exit

Changed settings are saved and the Operating System starts with the changed settings.

Discard Changes and Exit

Changed settings are not saved and the Operating System starts with the unchanged settings.

· Save Changes and Reset

Changed settings are saved and the Box PC restarts using the changed settings.

Discard Changes and Reset

Changed settings are not saved and the Box PC restarts with the unchanged settings.

Save Changes

Changed settings are saved and the BIOS setup stays open.

Discard Changes

Changed settings are reverted to their last saved values and the BIOS setup stays open.

Restore Defaults

Revert all BIOS settings to factory default.
